MINUTES OF THE UNIVERSITY SENATE
February 2, 2009

1. The regular meeting of the University Senate for February 2, 2009 was called to order by Moderator Susan Spiggle at 4:03 PM.

2. Approval of Minutes

Moderator Spiggle presented the minutes from the regular meeting of December 8, 2008 for review.

The minutes were approved.

Senator Mannheim complimented the University staff responsible for weather related closing decisions, stating that they are doing a good job of selecting the days to cancel classes.

4. Senator Thorson presented materials on the proposal he presented during December 8, 2008 Senate meeting concerning potential changes to the General Education W requirement.

Senator Thorson presented anecdotal accounts of his experiences and observations about undergraduate writing as well as selected statistics concerning the university’s resource commitment to the current writing program in preparation for the Senate’s discussion on W courses at its March meeting. He then briefly reviewed the history of writing instruction in the College of Liberal Arts and Sciences and the general education program.

Senator Thorson cited statistics from the recent assessment of the writing program, pointing out that 89% of students in their senior year demonstrated a moderate proficiency or less on the writing assessment. He pointed out that 55% of the courses taught—which are only moderately effective at raising students above moderate proficiency—are taught by full-time faculty. He argued that most of the writing instruction thus can be seen as remedial in nature. He stated his belief that the time of full-time faculty could be better spent in pursuits other than teaching remedial writing. His recommendation is that there must be a more effective and less expensive way to meet the W objective. Senator Thorson recommended the full Senate discuss the W requirement and then remand the issue to the proper committee(s) for further discussion and possible action.

Senator Mannheim asked what would be the latest date by which action could be taken and have it affect next year’s catalog. The response from Senator von Munkwicz-Smith was “last November.”

**Senator Freake moved the W discussion be postponed until the next meeting.**

**The motion carried.**

5. Senator Shultz presented the report of the Graduate Tuition Waiver Task Force.

Members of the Senate engaged in considerable discussion. Topics included: how the change in policy would affect the University’s ability to attract graduate students; potential dollar amounts that
would be taken from grants; would the imposition of the tuition charge foster an increase in the research enterprise of the University; lack of detail on how the generated income would be used; full vs. half teaching assistantships; and inequities that will result due to the way the University will charge tuition constituting a surcharge on students who are funded by grants that allow it. Senator Schultz noted that all faculty members of the Task Force were opposed to the introduction of graduate tuition charges on grants.

Senator Freake moved to refer the report to the Senate Budget Committee.

The motion carried.

6. Report of the President

President Hogan stated that we will not have a clear notion of what is happening with our state appropriation until April or even later. He said that last fall he was told that we should anticipate a further 10% rescission in our budget (which could be considered to be a 13% total carry forward if one includes the 3% rescission already effected). President Hogan has been meeting with state legislators regularly about the state of the university and he praised the efforts of the administrative staff to generate a positive message about the university. He said that lately there have been some encouraging signs that we might not face a 10% rescission, that it might be only an additional 5%. That would amount to a 9.4% shortfall for fiscal 2010 over previous projections. This would represent a gap from the real to the projected budget of about $34.6M. He reiterated that he does not yet know what the Governor will say in her budget message soon to be delivered.

President Hogan presented basic facts concerning the consequences of a 5% rescission. He thanked the members of the CORE committee for its hard work in coming up with a list of potential revenue enhancements and cost reductions that amount to about a $7M savings. This still, however, leaves a gap of $27M. To bring our budget into balance we will have to look to further spending reductions and tuition increases--assuming we are allowed to increase tuition at all. The Provost has asked Deans to devise plans to accommodate a 3%, a 5% or a 10% rescission. Even a 3% rescission would mean lay-offs at the university. Indeed such a rescission would mean about 160 lay-offs across the university. Our first priority should be to protect as many positions as possible. President Hogan expects that this budget crisis will continue. State revenues are down 24% and we may see as much as a 40% reduction in state revenues by the close of the year.

President Hogan noted that some have asked about wage freezes. He reported that he has met with the leadership of the unions concerning this but the situation is not completely clear yet. A wage freeze would help but would not do the whole job.

President Hogan then turned his remarks to the University of Connecticut Health Center and the John Dempsey Hospital. The units constitute one-half of our operating budget and one-half of our research funding. They are inextricably intertwined with the university’s program at Storrs and the regional campuses. The budget deficit at the Health Center is now $17 million and could rise to $22 to $24 million. Administrators there are preparing for 30 to 80 layoffs at the Health Center by the next fiscal year. Without wholesale closings of various large units of the hospital there is no way to get to breakeven. Such closings would have deleterious effects on the medical and dental schools at exactly a time when the state is facing a real shortage in physicians and dentists. We are the largest provider of physicians and dentists to the State of Connecticut.
The President announced the University is very close to a partnership agreement with Hartford Hospital that would create a university hospital with two campuses, one at Farmington and one in Hartford. This would move the University from a very small medical school hospital to a much larger more effective and efficient unit. The reports outlining this plan will be presented to Legislators. The cost to the state would be the cost of a new 250 bed hospital, over $475 million, plus some fringe benefit help, a total of about $500M. Under this plan the annual cost to the state (through bond service) would be about $40 million. Hartford Hospital will give the University between $5 and $7 million per year for the privilege of participating in this partnership, plus a share of any profits above $3 million. In the current economy such a profit is unlikely but Hartford Hospital will also assume all the future financial risk for the operation. They will also invest directly in future programs.

The President stated that he doesn’t yet know how this will play with the Legislature; he finds that everyone to whom we make a presentation is enchanted by the vision of this but is also worried about where the State will get the money. He stated the structural deficit simply must be repaired or eventually the hospital will close and the implications of that for the Medical School and research enterprise will be severe. For the first time now we have support from all the hospitals in the state save one in pressing forward our initiatives. Senator Lowe complimented the President on the remarkable accomplishment of getting all these players together and asked if there is any chance that St Francis Hospital also will become involved. President Hogan replied that he was not optimistic that they will and in any case he doesn’t believe that they can afford a partnership with us at this time even if they were willing.

7. Vice President Evanovich presented the Annual report on Financial Aid and Retention. 
   (Attachment #28)

   (Attachment #29)

1. We move the following faculty deletion from the named standing committee:

   Cora Lynn Deibler from the Student Welfare Committee

2. We move the appoint Cora Lynn Deibler to Chair the Diversity Committee effective immediately through June 30, 2009.

   **Items 1 and 2 were presented as one motion.**

   **The motion carried.**

3. We move to the following faculty and staff additions to the Diversity Committee effective immediately through June 30, 2009:

   Karen Bresciano as representative from the Growth & Development Committee
   Anne Hiskes
   Donna Korbel
   Joan Letendre as representative from the Student Welfare Committee
   Sue Lipsky as representative from the University Budget Committee
   Cathleen Love
Margo Machida
Maria Martinez
Dana McGee as an ex-officio, non-voting representative of the President’s Office
Sally Neal
Elizabeth Omara-Otunnu
Isaac Ortega as representative from the Curricula & Courses Committee
Mayté C. Pérez-Franco
Catherine Ross
Gaye Tuchman as representative from the Faculty Standards Committee
Susana Ulloa as representative from the Enrollment Committee
Steven Zinn

The names within items 3 were presented as one motion.

The motion carried.

4. We move the following student deletions from the named committees:
   Krista D’Amelio, undergraduate, from the Growth & Development Committee
   Christopher Ferraro, undergraduate, from the Budget Committee

5. We move the following student additions to the named committees:
   Wonchi Ju, undergraduate, to the Diversity Committee
   Janna Mahfoud, graduate, to the Diversity Committee
   Clive Donald Richards, undergraduate, to the Budget Committee

Items 4 and 5 were presented as one motion.

The motion carried.

   (Attachment #30)

10. Senator Lillo-Martin presented the Report of the Scholastic Standards Committee
    (Attachments #31, 32 & 33)

1. Motion on New Wording of Appendix A in the Student Code

   Background
   The definition of Academic Integrity included in Appendix A of The Student Code was adopted from the Graduate School. SSSC proposes to replace this definition with the following statement to underscore the importance of academic integrity in undergraduate education.

   Current Wording
   Cheating - Student Academic Misconduct
   Academic misconduct is dishonest or unethical academic behavior that includes, but is not limited, to misrepresenting mastery in an academic area (e.g., cheating), intentionally or knowingly failing to properly credit information, research or ideas to their rightful originators or representing such information, research or ideas as your own (e.g., plagiarism).
Motion
To adopt the following statement and recommend that it replace the current definition of Cheating in the Student Code.

Academic Integrity in Undergraduate Education and Research

This part of The Student Code describes the types of acts that shall be considered academic misconduct by undergraduates, and it presents the process for imposing sanctions for such acts.

The procedures for investigating complaints and imposing sanctions for academic misconduct differ somewhat from those applied to other violations of The Student Code. However, a hearing on academic misconduct follows the general procedures set forth in Part IV of The Student Code.

A. Academic Integrity

A fundamental tenet of all educational communities is academic honesty; academic work depends upon respect for and acknowledgement of the research, ideas and intellectual property of others. When we express our ideas in class assignments, projects or exams, we need to trust that someone else will not take credit for them. Similarly, others need to trust that our words, data and ideas are our own. We find the intellectual property of others in textbooks, periodicals, newspapers, journals, solution manuals, dissertation abstracts, emails, the internet and other sources electronic or otherwise. Regardless of where we find information, protecting and acknowledging the rightful originators of intellectual property is vital to academic integrity.

B. Academic Misconduct

Academic misconduct includes but is not limited to intentionally or knowingly failing to properly credit information, research or ideas to their rightful originators or representing such information, research or ideas as your own. Knowing what constitutes academic misconduct is so important to an educational community that all students are encouraged to go to their advisors, instructors, counselors, or assistant deans of students whenever they need clarification. Students who commit acts of misconduct will be held accountable for the violation and will be subject to the sanctions and other remedies described in The Student Code.

C. Examples of Academic Misconduct

The following examples of academic misconduct are illustrative rather than inclusive; therefore, this is not an exhaustive list:

Complicity - Helping or attempting to help another student commit an act of academic misconduct.

Cheating – Attempting to deceive by misrepresenting mastery in an academic area. This includes but is not limited to:
- Copying answers, text, or other information from exams, assignments, solutions manuals, publications, web sites, or other sources and presenting it/them as your own;
- Participating in unauthorized collaborations on labs, homework, take-home exams, etc.;
- Use or attempted use of any resources or devices that have not been approved by the instructor. These may include the unauthorized use of books, literature, notes, study aids, calculators, conversations, emails, earphones, PDAs, cell phones, pagers, cameras, or other means that are not authorized by the instructor on exams, homework, projects, and other assignments.
- Using the data or ideas of others from archived assignments from past courses, paper-writing services, or soliciting others to carry out an assignment on your behalf and presenting it as your
own without authorization by the instructor and/or without fully acknowledging the rightful originator.

**Fabrication** – Using invented data or information or falsifying research or other findings; this includes but is not limited to:
- Creating a false citation or acknowledgement of a direct or secondary source;
- Intentionally documenting a source incorrectly;
- Padding the bibliography; that is, including in a bibliography or other list of references a citation that was not used to prepare the assignment;
- Including any invented and/or manipulated data or information;
- Deleting or distorting data or information in such a way as to skew its interpretation or conceal its origin;
- Submitting an assignment (or parts thereof) prepared by another without attribution.

**Plagiarism** - Presenting as one’s own the published or unpublished ideas, data, words, or works of another that includes but is not limited to:
- Failing to properly attribute or acknowledge reproduced text or dialogue;
- Paraphrasing text or dialogue of another without proper attribution;
- Failing to provide complete and accurate recognition for the ideas, opinions, theories and other intellectual matter taken from others;
- Using data, facts, and/or other information that falls outside of the realm of common knowledge without proper attribution in the form of direct credit, footnotes, end notes or bibliography.

**Other Examples of Academic Misconduct or Dishonesty** include but are not limited to:
- Attempting to improperly influence any member of the university community via gifting, bribery, threats or other means;
- Presenting the same or substantially the same assignment without the authorization or knowledge of the instructor(s) in order to receive credit in two or more courses or academic areas;
- Falsifying the endorsement or approval of any member of the university community or the greater academic community;
- Altering, without authorization, an assignment, examination, grade, transcript, computer file, etc;
- Conducting unauthorized academic work for which another person will receive credit or be evaluated;
- Attempting to gain or gaining unauthorized access to restricted course resources;
- Selling or distributing restricted course resources;
- Misrepresenting your participation in a course;

Portions of this document been adapted from the web resources of:
- University of Delaware Code of Conduct: http://www.udel.edu/judicialaffairs/ai.html
- University of Maryland Student Honor Council: http://www.testudo.umd.edu/soc/dishonesty.html

The motion carried.

2. Motion regarding a Statement of Class Activities During Religious Holidays

**Background**
It is often difficult for students when exams and other in-class activities are scheduled on religious holidays. However, it is not practical to ask instructors to avoid scheduling activities on religious holidays, as a full list of such holidays would exclude almost all class times. Therefore, the SSC recommends that instructors be urged to make reasonable accommodations for missed work.

A similar statement is issued regarding class activities missed due to university-sanctioned extracurricular / co-curricular activities. This proposal has a different basis but a similar appeal to instructors for their reasonable accommodations.

**Motion**

The Senate recommends that the Provost send the following message to Deans, Directors, Department Heads, Faculty and Staff prior to the start of each semester.

**Statement on class activities during religious holidays**

Instructors are strongly encouraged to make reasonable accommodations in response to student requests to complete work missed by absence resulting from observation of religious holidays. Such accommodations should be made in ways that do not dilute or preclude the requirements or learning outcomes for the course. Students anticipating such a conflict should inform their instructor in writing within the first three weeks of the semester, and prior to the anticipated absence, and should take the initiative to work out with the instructor a schedule for making up missed work.

Senator Strausbaugh suggested strengthening the language requiring students to be more proactive and more responsible in preparing for these absences by substituting the word “must” for the word “should” in the statement “and should must inform their instructor” and “should must take the initiative to work out with the instructor . . . “ Discussion ensued. The amendment passed without dissent. The main motion as amended carried.

Senator Lillo-Martin presented a motion from the Scholastic Standards Committee concerning the period during which students may make up work to change grades of I,X,N and Y.

**The motion carried.**

3. Presentation of Completion of Incomplete Grades Proposal for Vote at the March 2, 2009 Senate meeting.

**Background**

- In November 2007 the Senate passed a motion presented by the Scholastic Standards Committee to change the bylaws (II.E.6) to remove the words “in which they are enrolled” from the section on “Grades of Incomplete and Absent”. See item #9 in minutes and attachment #18: [http://senate.uconn.edu/SenMin/senmin.20071112.pdf](http://senate.uconn.edu/SenMin/senmin.20071112.pdf)

The approved change to the bylaws relates only to II.E.6. Unfortunately, section II.E.3 also refers to “the subsequent semester in which a student is enrolled.” The words “next semester” should replace the phrase, “subsequent semester in which a student is enrolled”.

The same section of the by-laws also includes reference to bracketing of the GPA on student transcripts when temporary grades are assigned. This practice is no longer followed and so the wording should be deleted.

Motion
By-laws section II.E.3 shall be changed as follows:
(Deleted items in strikethrough; new language in bold)

3. Undergraduate Grades
Undergraduate grading shall be done according to a letter system in which A and A- shall represent excellent work; B+, B, and B-, very good to good; C+, C, and C-, average to fair; D+, D, and D-, poor to merely passing; F, failure; I for incomplete; X for absent from semester examination (see II.E.6 below); AUD for course auditors (see II.B.6). With the approval of the Senate Curricula and Courses Committee, courses may be graded S to represent satisfactory work or U, unsatisfactory work. These courses may or may not award credit, but in neither case will grade points be awarded. With the approval of the Senate Curricula and Courses Committee, courses may be graded Y to identify non-semester related courses. When such a course is completed, a standard letter grade will replace the Y grade. If the course is not completed, the assignment of a semester grade shall be at the discretion of the instructor and the dean of the student's school or college. The letter N is used when an instructor does not submit a grade for a particular student. Temporary grades I, X, N, Y shall not suppress the calculation of either the semester or the cumulative grade point average; however in such cases, the grade point average will be bracketed on the academic record.

N and Y temporary grades are replaced on the academic record by the actual grade when submitted by the instructor. Work to convert I, N, X temporary grades to permanent grades must be completed by the end of the third week of the next semester subsequent semester in which a student is enrolled. An N grade which remains unresolved will become N F and be computed as an F. If no grade is submitted for a grade of X, the grade will automatically revert to F and will be shown as X F.

If no grade is submitted to replace the grade of I, the automatic F will be shown as I F.

The following grade points per credit shall be assigned to grades: A, 4.0; A-, 3.7; B+, 3.3; B, 3.0; B-, 2.7; C+, 2.3; C, 2.0; C-, 1.7; D+, 1.3; D, 1.0; D-, 0.7; F, 0.

No student who has failed in a course shall have further opportunity to receive credit in that course except by repeating the work.

In all non-credit courses students shall be reported as passed "P" or failed "F".

(Assignment #34)

The Faculty Standards Committee moves to include patents in the PTR form as shown in red:

B. SCHOLARSHIP AND CREATIVE ACCOMPLISHMENTS (including art exhibits, musical compositions, and/or dramatic productions). All listed items should be in reverse chronological order.
1. Briefly (suggested length 300-500 words) outline your scholarly/creative goals for the next 5 to 10 years and the activities you have initiated to achieve them.

2. Scholarly/Creative Record. Provide full citations of your published work in the standard entry form used in your field for the categories listed below. Each citation should include a complete list of authors and pagination. (Do not include work in progress, submitted for publication, or in press).
   a. Books, Monographs
   b. Book Chapters
   c. Textbooks
   d. Refereed Journal Articles
   e. Conference Proceedings
      • Full length papers
      • Abstracts
   f. Miscellaneous Publications (including reviews, technical articles, and non-refereed journal articles)
   g. Exhibits, Performances, Curatorial Activity
   h. Awarded Patents

3. List published reviews of your scholarly work or creative accomplishments. (If available, attach copies as an appropriately labeled Appendix.)

4. List unpublished or unreleased work (including where it was submitted/accepted).
   a. Now accepted or in press (attach acceptance letter as an appropriately labeled Appendix).
   b. Submitted for publication or dissemination (with date of submission).
   c. Pending Patents

5. List creative works or manuscripts currently under preparation. (If you wish work in progress to be part of your evaluation, tangible evidence of the work must be made available for review. Provide this as an appropriately labeled Appendix.)

   The motion carried.

   (Attachment #35)

I. The Curricula and Courses Committee presents the following motion to REVISE membership and voting rights on the General Education Oversight Committee in section II.C.2.d. - Oversight and Implementation of the General Education Requirements.

BACKGROUND:
The General Education Guidelines currently specify that the “Directors of the University W and Q Centers will also be given non-voting appointments to GEOC.” The GEOC agrees that W and Q Center representation on the GEOC is important but argues that it need not always be the Director who must serve, but the Associate Director could serve in his/her place. The GEOC therefore recommends to change the language of the Guidelines to include Associate Directors of the W and Q Centers when the Directors of those Centers do not serve. It is understood that the W and Q Centers shall have ONE appointment each of either the Director OR the Associate Director.
According to the General Education Guidelines, W and Q Center Directors serve on the GEOC as non-voting ex-officio members. All other members, all of them co-chairs of GEOC subcommittees, are voting members. Whenever a W or Q Center representative is also co-chair of the respective GEOC subcommittee, s/he may currently not vote. This creates inequity among subcommittee co-chairs. The GEOC recommends the General Education Guidelines to be revised to allow W and Q Center representatives (the Directors or Associate Directors as outlined above), when they serve as co-chairs of a GEOC subcommittee, to retain voting rights. This change supports equity among GEOC subcommittee chairs and allows representatives of the Q or W Centers to vote in GEOC on matters discussed in their subcommittees and brought forth by these subcommittees to GEOC. When W and Q Center Directors or Associate Directors are not subcommittee chairs, they shall not have voting rights on the GEOC.

MOTION:
(Additions are in boldface):

d. Oversight and Implementation
“General Education Requirements will be overseen by a General Education Oversight Committee (GEOC), a faculty group appointed by the Senate and representative of the Schools and Colleges. The Committee also will have an undergraduate and graduate student representative. The GEOC shall be a subcommittee of the Senate Curricula and Courses\ Committee whose chair will serve as a non-voting member of GEOC. The Directors of the University W and Q Centers will also be given non-voting appointments to GEOC. Representatives, either the Director or the Associate Director, of each of the W and Q Centers, will also be given non-voting appointments to GEOC. When Q or W Center Directors or Associate Directors are GEOC subcommittee chairs, they shall retain voting rights in the GEOC. The GEOC will monitor the General Education curriculum. The creation of a Senate-appointed committee recognizes the policy control of the Senate in matters relating to undergraduate education. This Committee will work in association with the Office of Undergraduate Education and Instruction because this office has University-wide responsibility for the health of undergraduate education and the fiscal resources to address emerging issues. Financial support for the activity of the GEOC will come from the Office of the Provost.”

A motion to amend the wording to include “and are members of the University faculty” before “they shall retain.”

The motion to amend carried.

The motion, as amended, reads:

d. Oversight and Implementation
“General Education Requirements will be overseen by a General Education Oversight Committee (GEOC), a faculty group appointed by the Senate and representative of the Schools and Colleges. The Committee also will have an undergraduate and graduate student representative. The GEOC shall be a subcommittee of the Senate Curricula and Courses\ Committee whose chair will serve as a non-voting member of GEOC. The Directors of the University W and Q Centers will also be given non-voting appointments to GEOC. Representatives, either the Director or the Associate Director, of each of the W and Q Centers, will also be given non-voting appointments to GEOC. When Q or W Center Directors or Associate Directors are GEOC subcommittee chairs, and are members of the University faculty, they shall retain voting rights in the GEOC. The GEOC will monitor the General Education curriculum. The creation of a Senate-appointed
committee recognizes the policy control of the Senate in matters relating to undergraduate education. This Committee will work in association with the Office of Undergraduate Education and Instruction because this office has University-wide responsibility for the health of undergraduate education and the fiscal resources to address emerging issues. Financial support for the activity of the GEOC will come from the Office of the Provost.”

**The main motion as amended carried.**

13. There was a motion to adjourn.

The motion was approved by a standing vote of the Senate.

The meeting adjourned at 6:19 PM.

Respectfully submitted,

Robert F. Miller  
Professor of Music  
Secretary of the University Senate

Report of the Senate Executive Committee

to the University Senate

February 2, 2009

The Senate Executive Committee has met twice since the December 8th meeting of the University Senate.

On January 23rd the Senate Executive Committee met in closed session with Provost Nicholls. Afterwards the SEC met with the Chairs of the Standing Committees to plan for the agenda of this meeting and to coordinate the activities between the committees. Among the items discussed were consulting and compliance policies and procedures, the budget situation and the population of the new Diversity Committee.

SEC members Anne Hiskes, Susan Spiggle and Pam Bramble, who constitute the organizing committee for this year’s Trustee, Administration, Faculty and Student (TAFS) meeting presented plans for this year’s meeting that will be held after the Board of Trustees meeting in February. The discussion will focus on “Learning from History: Higher Education and Society in Challenging Economic Times.”

On January 30th the Senate Executive Committee met in closed session with President Hogan. Afterwards the SEC met with Administrators. The budget continued to be a central focus, including the suggestions arising from the CORE committee. The President also outlined the current status of negotiations with Hartford Hospital over the future of the University of Connecticut Health Center. Other items discussed included commencement and the academic calendar, the current state of the building program, admissions activities and the decision making process around responses to bad weather.

Following the meeting with Administrators, members of the SEC met with Lawrence Gramling, the Senate’s representative to the Coalition on Intercollegiate Athletics to discuss the activities of that group.

Spring constituency elections are currently underway. Please vote.

Respectfully submitted,
Hedley Freake
Chair, Senate Executive Committee
February 2, 2009
Thoughts on W Courses (Robert M. Thorson, January 29, 2009)

PURPOSE: I have no personal or professional stake in this issue beyond wanting students to write well and the university to save money without compromising its academic program. I have never taught a W course.

DEFINITION: Quoting Tom Deans, Director of the Writing Center and author of the 2008 W Course Assessment Report, writing is “less a set of discrete skills” than a “complex, context-sensitive mode of learning, communicating, and doing.” Given this definition, I believe that writing should be part of all courses to the degree warranted.

REMEDIAL EDUCATION: Students who need help with basic writing after first-year English are responsible for seeking that help, and the university is responsible to provide it. Faculty in cognate disciplines should not be required to remediate basic skills. Yet this is precisely what takes place in my own courses and in hundreds of others. Quoting the assessment report, “That so few papers were rated unsatisfactory is likely a consequence of policies that keep W course size small, allowing ample student-faculty interaction, and that require revision, prompting faculty to get involved early in each student’s writing process.” Translation? Faculty are spending lots of time teaching writing. This would be fine, were it not the fact that, “the overall quality score for 83% of the [128] papers …collected for this study… fell between ‘minimally proficient’ and ‘moderately proficient…” and “…the evaluators did not find evidence that seniors are writing better papers than sophomores or juniors.” Translation? Based on the studied sample, “ample student-faculty interaction,” resulted in marginal proficiency and little change. There must be a better way.

COST: Salaried, full-time faculty holding the rank of full, associate, and assistant professor teach more than half (54.8 %) of all W course credit hours within the entire university system. Full professors (19.4) teach nearly as many W credits as assistant professors (20.7), and significantly more than associate professors (14.7). The total credit load of W courses for full professors exceeds that of both adjuncts (19.2) and graduate assistants (18.6). The teaching of writing by senior faculty within cognate disciplines is fully justified when done above the remedial level and within the student major. What constitutes good writing for the New Yorker, a legal brief, a case history, or a journal article is best understood by those with discipline-specific experience and with an incentive to place their students in good jobs. Cost becomes a problem only when the students aren’t yet ready for that level of focus and refinement.

RECOMMENDATION: I urge the full University Senate to take up this matter and remand it to the appropriate committee or task force. Many of my colleagues in this room know far more about this problem than I. They are very willing to help.

Sources: Quotes are from the 2008 W Course Assessment Report, prepared for the General Education Oversight Committee, and composed by Tom Deans. Numerical Data on faculty W course loads for Fall 2007-Spring 2008 from Pamela Roelfs, director of the Office of Institutional Research.
At the last Senate meeting on December 8, 2008, I was delighted to hear a clear majority of members vote to have a full and open discussion on the efficacy of W courses and the potential for cost savings by eliminating some or all with a moratorium.

I agree with Vice Provost Veronica Makowsky’s suggestion that some background information needs to be assembled and shared in order to have a productive discussion. I’m in the process of gathering that information now and offer to share it with the senate via a short oral presentation of the salient facts, accompanied by a handout. Jeff von Munkwitz-Smith has offered to present briefly as well.

I also agree with Senator Karla Fox’s suggestion that the subject be referred to a committee, but only after the full senate has had a chance to discuss it. It was clear to me that many senate members are starved for such an open discussion, notwithstanding the fact that the mechanistic process we usually follow is quite effective.

Please advise me if there is room on the agenda for this at the February meeting, and if so, what I can do to help. To that end, I attach an anecdotal text that lays out my rationale for putting a moratorium on W courses between first year English and the department capstone requirement. My bias is simply to mention this subject at the February Senate meeting, hand out whatever information is available, and save the discussion for the March meeting, when we can devote the time the subject deserves.
Thoughts on W Courses for Senate Consideration

**Impulse.** This is not a pet project of mine. Rather, it was in impulsive act, prompted by the logical request of Senator Darre (Chair, Senate C&C committee) for approval of something that sounded illogical to me -- the Senate has jurisdiction over the W component of a course they have no jurisdiction over.

**Credential.** As someone who has encountered “publish or perish” in technical literature, the book trade, and as a journalist, I have earned my writing credentials the hard way, which I believe is the only way, one we should model for our students. Work. I was a poor writer when I entered college. Freshman English helped me become marginally proficient. Any later improvement came about because I had no alternative: I either had to become proficient or leave academia. Help, of course, was available, but the responsibility was entirely mine.

**The Gist in Three Parts.** I believe that: writing is the single most important skill that a university graduate should possess; that the W course model is the wrong way to achieve this objective; and that the teaching of remedial writing by permanent faculty is financially wasteful.

**Commingled Problems:** (1) **Responsibility:** deciding who should teach writing competence in a world that seems to value it less and less; (2) **Proficiency:** ensuring that nobody graduates from the university without having demonstrated a competency; and (3) **Pedagogy:** the method of instruction.

Aside from parents, the main responsibility for teaching writing lies with the K-12 curriculum. We should not admit a student who cannot write, which is why I am pleased with the idea of a written portion of the SAT test. The K-12 curriculum must rise to the level we set, rather than forcing us to descend to the level they graduate.

I don’t know of a single professor who doubts that colleges and universities have the responsibility to upgrade the reading/writing skills beyond what high schools can do. This is what first-year English is all about: the ability to read carefully and write clearly. A student who lacks these twin skills is vulnerable to failure.

Nor have I met a professor who doesn’t believe that a graduating student must have exposure to discipline-specific writing skills. What constitutes good writing for the New Yorker, a legal brief, and a laboratory protocol is best understood by professors in the cognate disciplines, all of whom have an incentive to place their students in jobs. Hence, having a capstone writing requirement in an academic department is completely justified. This is not about certifying that the student has met some competency (as with a Q course). Nor is it about or exposing them to something they should be exposed to (as with the GEOC distribution requirements). Rather, it is an instituted responsibility to provide the students the writing skills they will need for whatever genre, style, purpose, or market their future jobs will require.
The Q-W Contrast: … is particularly revealing. For the most part, Q courses don’t teach math. Instead, they are courses where competence in mathematics (algebra, trigonometry, and analytical geometry) is required to comprehend the material and pass the course. The university must provide the help needed, and does so in the help-center model with the Q Center. But the responsibility for getting that help is that of the student. With W courses, however professors with no training in the teaching of writing are required to teach it, and to devote considerable time toward raising competence in a basic skill that first year English was supposed to have ensured. In other words, we are using discipline specific core faculty for remedial education.

Three Perspectives: From my professorial perspective about half of my upper division students passed through first year English without gaining the required set of skills. I see this every year because my major course (Geol 3020: Earth Surface Processes, required for all Environmental Science, Earth Science Education, and Geoscience majors) requires a journal article, an open-ended essay, a portfolio of lab and field experiences, an abstract for a symposium, and a journal. They write more in this non-W course than in some W courses, and much of my time is spent helping students write, by which I mean those students who seek my help.

From the student perspective, undergraduates who gained the skills in first year English are either penalized by boredom while working on writing in W courses, or are under-challenged. I know of one political science student who was a good writer all along who said she took seven W courses instead of the three she needed because the content she wanted just happened to be designated W. She spent much of her time in busy work.

Another problem involves commingling a skill called writing and content called knowledge. In some cases, good skill is mixed with good content. But good skill can be mixed with bad content; bad skill with good content; and bad skill with bad content. A student who struggles with writing, for example, may dislike ecology if that’s where she had writing instruction. Conversely, a student who loves ecology might learn to dislike writing because it detracted from the course.

From the advising perspective, there’s the labyrinth of requirements leading to graduation. For at least 20 years I have watched panicked students try to meet the W requirement in their last semester. Many end up taking courses they don’t want and bypassing ones they do want in order to get that precious W, even when they’re writing is fine. In fact, if we were to drop the W requirement, I suspect that our rankings in U.S. News and World Reports would rise because more students would graduate in 4 years, and the faculty taking the time to teach remedial writing would be more productively engaged elsewhere, like getting grants or serving on national committees.

Bottom Line: I have never taught a W course because nobody has forced me to. Writing is too important to be parcelled out here and there. I believe that when a professor creates a good course, they know what mix of W, Q, and other skills are needed, and then weave them into the course as necessary. Erecting a scaffolding of rules and a university-wide bureaucracy to manage W courses is the wrong way to go. Besides, it costs too much.
Report of the Senate Ad Hoc Committee to Review the Impact of Charging Graduate Tuition on Grants

I. Summary

Using the best available information, we estimate that about $2.5 million in new revenue could be acquired, and a reduction of 25% in the number of research assistants could result, if the tuition waiver for graduate research assistants is eliminated. This estimate takes into account the fact that some major granting agencies do not allow tuition charges, and that there are maximum funding levels (caps) at some agencies that do allow tuition charges. The estimate of realized new revenue is generous; it is biased high to an unknown degree because it is not possible to account for how the tuition waiver affects the incentive to support graduate students on grants.

Many, if not most, major universities charge at least a portion of in-state tuition to grants. Comparing the expense of supporting graduate students on grants among institutions that are ranked in the top 25 reveals that at present, with the tuition waiver, the University of Connecticut is close to the median. Elimination of the tuition waiver would make the University of Connecticut one of the most expensive institutions for support of graduate students on grants.

Eliminating the tuition waiver could have multiple repercussions on academic programs. Incentive to support graduate students would shift in favor of supporting other personnel, such as postdoctoral associates. A decrease in the total number of graduate students at the university could negatively affect research productivity and competitiveness, and could adversely affect some worthy graduate programs. Increases in the degree to which graduate programs rely on teaching assistantships for support would have a negative effect on graduate research productivity.

A survey of University of Connecticut faculty indicated widespread opposition to eliminating the tuition waiver. The survey indicates the expectation that there would be reduced graduate support on grants, and reduced availability of grant funds for other research expenses.

If the tuition waiver is to be eliminated, a policy of levying a fixed proportion of full-time, in-state graduate tuition is preferred over other possible policies. Imposition of GRA tuition and fees charges on grants must be flexible and should include a review and appeals process for retention of the tuition waiver in some cases.

If the tuition waiver is to be eliminated, revenue that is gathered from tuition charges should be used for new expenditures in research or graduate education rather than replacement funding to offset other sources. A means to maintain transparency and accountability in this allocation process is essential.

Faculty and student members of the ad hoc committee are firmly opposed to the proposal to eliminate the tuition waiver for graduate research assistants. The current system of tuition waivers represents a substantive institutional commitment to research and graduate education. Given the institutional context (relative expense of supporting graduate students) and current funding climate (decreasing agency support and poor economic state), we do not feel that the proposed policy would result in net benefits to the University of Connecticut.
II. Introduction and charge of the committee

The concept of eliminating or modifying the waiver of graduate tuition for GRAs on grants has been discussed within the Provost’s office for several years, but no documentation of these discussions is available.

The Academic Plan that was completed in 2008 explicitly indicates an interest in examining the tuition waiver policy. Goal 6 of the Academic Plan, under the heading “Administrative Organization, Capital Infrastructure, and Budget Processes” is to “Establish administrative, infrastructural, and budget systems designed to efficiently realize the goals of the Academic Plan”. Strategy C within Goal 6 is to “Pursue new revenue streams while refining existing budget processes”. One of the items within Strategy C is to “Ensure that we are appropriately budgeting the costs of research and education programs in accord with the allowable costs articulated in our federal, state, and agency agreements, including indirect costs and the costs of supporting research assistants, while remaining competitive in our pursuit of extramural funding to support the goals of the Academic Plan”.

Public forums regarding the academic plan that took place in the spring of 2008 alerted the University community of the possibility that tuition waiver policy might change and stimulated reactions of several legislative bodies. In February 2008, the Research Advisory Council adopted a statement (Appendix A) that detailed multiple negative consequences would result were the tuition waiver to be eliminated. The Executive Committee of the Graduate School (on 5 March 2008) and the Graduate Faculty Council (on 16 April 2008), passed on voice votes the following resolution:

It is the sense of the Graduate Faculty Council that the introduction of tuition for graduate assistants would adversely affect the programs of the Graduate School and is inconsistent with key goals of the draft Academic Plan. We agree with and support the position of the Research Advisory Council statement regarding these waivers.

We therefore urge that the policy of waiving tuition be continued.

A draft policy document clarifying how the cost of graduate students could be captured in external funds was circulated in June of 2008. It stated that the plan would …simply require that if a faculty member submits a research funding proposal to a federal funding agency that includes in the direct costs support for graduate research assistants, then the direct costs of the proposal should also include the in-state tuition for all such graduate assistants, provided this is permitted by the funding agency [emphasis in original]. The plan calls for no other changes. The University would continue to provide tuition waivers for graduate teaching assistants and for graduate research assistants employed on state or local funds or from federal agencies that do not permit tuition to be charged on the direct costs of a grant.

Further documentation distributed by the Provost to this committee indicated that the change would be initiated for new grant proposals submitted after June 30, 2009. There would be no mandatory tuition charges levied on grants awarded prior to that date.

---

1 Limitation of the proposed change to federal agencies in this document was an error, the proposed change was intended to apply to all external funding sources that permit the charge of graduate tuition to grants
The proposed change in tuition waiver policy was presented to the Senate by President Michael Hogan on 28 April 2008. Following this presentation a motion from the Senate University Budget Committee was passed by the Senate. In its amended form the motion read: The Senate University Budget Committee moves that the Senate Executive Committee and the Administration create a task force to examine the financial viability of the recent proposal to charge graduate student tuition to grants or other sources and the resulting budget financial and academic impact on the total university. The task force would be comprised of representatives from the Senate, Graduate Faculty Council, Research Advisory Council, Graduate Student Senate, and appropriate Administration members. The task force will report back to the Senate by Spring 2009.

Appointments were made to the committee in May. The committee included representation from the office of the President, the Provost, faculty representation from multiple schools and colleges, and the Graduate Student Senate (Appendix B). The committee was initially chaired by the Provost. After discussing progress on the review of the proposal with the Senate Executive Committee, the Provost agreed to recuse himself from the ad hoc committee. Schultz and Singha agreed to serve as co-chairs on 6 November 2008.

The remainder of this report addresses the charge of the Senate’s resolution in several sections. The financial impact of the proposed change is analyzed in Section III, wherein we estimate the additional revenue that would be captured if tuition was charged in grants from sources that permit such a charge. In Section IV, we focus on alternative ways of charging tuition to grants, and suggest means of implementation should the policy change be adopted. Subsequent sections consider academic impact as well as financial impact. Because the academic growth of the institution is affected by the relative expense of conducting research at the University of Connecticut in comparison to its peers, we present an analysis of GRA costs at selected research-intensive institutions, along with metrics of graduate enrollment and federal funding for research (Section V). The academic impacts on the University of charging tuition to grants are considered in Section VI.

III. Financial impact of eliminating tuition waiver at University of Connecticut

To estimate the revenue that would be realized with a change in policy, we began with an account of how many GRAs are supported in various units (Table 1). This accounting was done in the fall semester of 2007. At that time there were almost 600 GRAs on campus, in eight academic and two administrative units. The tuition costs for these GRAs, which appear in University financial statements as potential revenue lost to the Operating Fund, total more than $9 million. This represents a starting point for our estimate of revenue potential if the blanket tuition waiver policy were eliminated. This starting point is listed as Scenario 1 in Table 2.

As a starting point, Scenario 1 assumes that tuition is recovered from all GRAs, i.e. that all GRAs are supported on grants from agencies that permit tuition charges as an allowable cost (Table 2). To make realistic adjustments away from this assumption, an exhaustive study of

---

2 An amendment to add ‘or other sources’ was introduced by Senator Sally Reis, to cover support for GRAs that originates from the University of Connecticut Foundation.

3 Tuition charges assessed to the General Fund used actual credit enrollment of each student and varied according to whether the student was in-state, out-of-state or international.
sponsored grants was conducted to determine if the sponsoring agencies had a declared policy on charging tuition on grants. The information was compiled by matching each student with his/her funding source and on the number of credit hours for which each student was enrolled. We found that more than 350 GRAs are supported on grants in which tuition is an allowable cost. About 50 are supported on grants in which tuition is not an allowable cost. The remaining 182 GRAs are supported on grants from agencies whose policy on tuition charges was not immediately evident. In lieu of contacting many agencies for clarification, we assumed that tuition charges would be permissible on half of the remaining GRAs. As a result of these adjustments, Scenario 2 (Table 2) assumes that there are about 460 GRAs on whom tuition could be charged. In another adjustment, Scenario 2 incorporates the Provost’s agreement that tuition charged to grants will not exceed the full-time in-state rate. These adjustments reduce the revenue that would be realized by eliminating the tuition waiver to about $3.25 million.

Scenarios 1 and 2 assume that eliminating the tuition waiver would not change the number of GRAs. Two limiting factors could cause the number of GRAs to decrease if the tuition waiver were eliminated. The first limiting factor, which we can account for in our scenarios, is that grant amounts at many agencies are capped; in such cases, an increase in one charge category will occur at the expense of another category. Caps can be placed on the total grant request, or on personnel costs (e.g. NIH limits total GRA compensation to the amount paid to postdoctoral associates; grants.nih.gov/grants/guide/notice-files/not98-168.html). To account for this limiting factor, we have assumed that in 50% to 75% of the grants, the student request is reduced so that the total grant request remains unchanged. The 50% to 75% figure was based on the type of research grants, and on feedback from researchers and program officers. It should be noted that the revenue realized by charging tuition for each GRA is partially offset by reduction in IDC, as grant expenses shift from categories that are subject to IDC charges into tuition, which is not subject to IDC. Hence, the effective revenue to the university is 68% of the tuition charged. The reduction factor of 68% was verified in 15 randomly selected grants. With these adjustments, Scenario 3 (Table 2) projects the revenue that can be realized by eliminating the tuition waiver to $2.5 million to $2.75 million. The corresponding reduction in the number of GRAs would be 110 to 165 (from a total of 600, a reduction of 18% to 28% of GRAs).

A second limiting factor that could cause the number of GRAs to decrease if the tuition waiver were eliminated is reduced incentive of PIs to support graduate students on grants. In other words, charging tuition to grants will make graduate students more expensive and may affect their value to sponsored research relative to other personnel categories, such as technicians and post-docs. We have not incorporated this factor in the revenue scenarios of Table 2 because there is no basis for quantifying how great the change in incentive may be. Nonetheless there is evidence that elimination of the tuition waiver will have a potent negative effect on GRA support (see Section VI). Therefore the scenarios presented here must be regarded as generous projections of the revenue that might be captured were the tuition waiver to be eliminated.

Scenarios 1-3 assume that the charge structure for tuition is unchanged. Some institutions charge a lower rate for GRAs that have passed doctoral qualifying exams and other requirements for degree candidacy. About 25% of GRAs at UConn are candidates for their degree. Scenario 4 (Table 2) envisions a tuition charge for candidate students that is 50% of the pre-candidacy rate. This scenario projects the revenue that can be realized by eliminating the tuition waiver for University of Connecticut graduate students to about $2.2 to $2.4 million.
The financial support of graduate students affiliated with the UConn Health Center differs from that of students on the main campus. The Health Center has about 150 PhD students, 140 of which are supported on grants. All PhD students on the Farmington campus are admitted as GRAs; approximately 40 GRAs that exclusively support 1st and 2nd year students are available through the Graduate Programs Committee (GPC). The remaining GRAs are funded by faculty grants, training grants (16), or individual awards to students as Individual National Research Service Awards. The assistantship includes a stipend (projected to be $27,500 for fiscal year 2010), student health plan and, currently, a waiver of tuition and the majority of fees. In keeping with NIH guidelines, the Health Center currently recovers 60% of tuition costs from training grants as well as individual NRSAs. These monies are used by the GPC in support of the graduate program. We estimate that elimination of the tuition waiver would yield slightly more than $200,000 (Table 2).

IV. Consideration of alternative methods of charging tuition to grants

Judging from a review of top universities and colleges (see Section V), there are four general categories of policy regarding tuition charges. The policy that is currently in place at the University of Connecticut permits a complete waiver of graduate tuition on all grants, even if tuition is an allowable cost on a proposal.

A second approach is referred to here as the Actual Costs approach. At such institutions the real costs of in-state tuition and fees for graduate assistants funded by a grant are required on budgets of all extramural grants and contracts, provided that these are allowable costs. The charge varies with the grade of the student’s position (i.e. what UConn refers to as the level) and whether the student is a resident or nonresident. For example, at UCLA “[GRAs] appointed at 25% time or greater qualify for [100%] fee remissions …. The hiring department is responsible for paying these fee remissions from the same account-fund as the salary source…..[nonresident GRAs] …. qualify for nonresident tuition remission….. The hiring department is responsible for paying the nonresident tuition remission from the same account-fund as the salary source”. Note that this requires adjustment of the budget if student(s) changes status.

In the Projected Average Costs approach, a University-determined tuition and fee recovery rate is required on all extramural grants and contracts supporting graduate assistants, provided that these are allowable costs. The university finance office and/or research administration office establishes the required level of tuition and fees that must be charged to grants and contracts. The established level of recovery is based on an estimate of current and future average tuition and fees that would be charged to students funded on grants, taking into account such factors as mix of pre-candidacy and in-candidacy students and differential tuition rates across programs over the life of grants. For example, at the University of Michigan “Resident tuition and fees are charged to sponsored accounts on the basis of the per term figures established by the Board of Regents…. [to] facilitate the preparation of budgets, sponsored projects are charged average tuition rates regardless of the number of credit hours for which the [GRAs] are enrolled”. Note that this approach does not require adjustment to the budget if the student(s) change(s) status.

In the Unit Decision approach, departments have the option of charging tuition and fees to extramural grant budgets (and level of charge), but departments are charged tuition and fee costs for each student appointed as a graduate assistant (irrespective of funding source) by the Graduate School or other central administration unit. This is often used as part of a
Responsibility-Centered Management (RCM) budget approach, in which the responsibility of generating revenue through tuition charges lies with the unit, as does the allocation of service and administration costs. The goal of such a budgeting scheme is to increase revenue while decreasing costs through unit planning and unit-level control on tuition fees and enrollment.

If the complete tuition waiver were discontinued, we regard the Projected Average Costs approach as most suitable for the University of Connecticut. An important advantage of this policy is the simplicity of implementation. In contrast to the Actual Costs approach, grant budgets would not change when a student changes status (for instance, upon attainment of degree candidacy or state residency) or with changes in credits enrolled. Unit Decision budgeting would confer the benefits of local control over decision making but would not evidently be feasible to implement at the University of Connecticut. Projected Average Costs budgeting would require only that a PI estimate tuition charges on a grant based on a head count of GRAs. The charges to be levied on grants could be some proportion of full-time pre-candidate tuition rather than the full amount, reflecting the expectation that some GRAs will have achieved candidacy (which at many institutions results in a considerable reduction in tuition and fees charges, see Section V).

If the proposed elimination of the tuition waiver were to be implemented, imposition of GRA tuition and fees charges on grants must be flexible. Graduate fellowships present one area in which such flexibility is needed. Fellowships often provide only partial support and are typically supplemented with partial Teaching Assistantships or partial GRAs. Subjecting grants to the same tuition charge as a full GRA would be unfair and would have a detrimental effect on desirable fellowship funding. Therefore there must be some provision for proportionate tuition charges in these cases, or full waivers. At the same time, providing students with only partial support in total as a way of reducing tuition payments budgeted to a grant should not be allowed. Tuition waivers should remain in proposals going to agencies that require institutional or state match, which is often a substantial portion of the overall grant amount. The GRA tuition waiver has been an important source of such match for PIs, and should remain available. Another consideration is the size of the grant. Smaller grants have fewer degrees of freedom to absorb other costs; for instance, if grants are capped to relatively low amounts a PI may be forced to choose between supporting a GRA and having adequate supplies for the research.

Because it is not possible to anticipate all circumstances in which PIs would have a legitimate justification for retaining a tuition waiver, a review and appeals process should be established. This could be a separate tuition waiver appeals committee or an existing body such as the Research Advisory Council. Decisions need to be made on timely basis so the group needs to meet regularly and/or act swiftly.

V. Comparative analysis of graduate tuition practices

We conducted an analysis of the tuition charge policies of other institutions that are ranked among the top 25 public institutions (as identified by U.S. News and World Report4,

---

4 The Aspiration and Values section of the 2008 Academic Plan states “[O]ur aspiration is to emerge as one of the top-20 public universities in the nation.” The position of the University in the U.S. News and World Report rankings is a matter for discussion every year upon release of the survey; in 2003 and 2007 the University of Connecticut was ranked among the top 25, and in 2008 UConn is in a four-way tie just below this group. The President and Provost have recently suggested (“Administrative Update”, e-mail to UConn_Faculty-L@LISTSERV.UCONN.EDU, 12/11/2009) that U.S. News and World Report rankings of individual graduate
http://colleges.usnews.rankingsandreviews.com/college/national-top-public). Information on these policies and other institutional attributes (Table 3) was solicited via phone contacts with institutional representatives in offices responsible for grants administration, budgeting and/or graduate schools. In some cases these contacts yielded memos reflecting institutional policy, while in other cases yielded only verbal communication of current practices. The data in some cases represent a selected scenario within the institution. For instance, graduate stipends can vary among programs within an institution, and in an effort to standardize the comparison we have tabulated the stipend for students in the natural sciences. Footnotes in the table provide annotations for other variables. Because it has a pronounced effect on the costs of supporting GRAs, the table includes data on graduate student unionization.

The top institutions vary in their tuition charge policy. The Actual Costs approach is employed at a slim majority of the institutions. Five institutions follow a Projected Average Costs approach, and six of the institutions use Unit Decision (RCM budgeting). Two institutions in this group, William & Mary and the University of Connecticut, do not require tuition charges on grants as a matter of institution-wide policy.

Tuition rates (including fees) were compared assuming a full-time pre-candidacy in-state rate. Among the institutions listed in Table 3, tuition at the University of Connecticut is above the median (8th highest out of 26 institutions tabulated). The other institution that does not currently require tuition charges on grants, William & Mary, is 9th.

Many institutions have a different rate for pre-candidacy and in-candidacy students. Usually the candidate rate is lower than the pre-candidate rate. The candidate rate is levied to students who have completed all coursework and passed their comprehensive or field exams. Such students may not take formal coursework, although in many instances they are registered for “dissertation” or “research” credit hours\(^5\). For the institutions listed in Table 3, a separate tuition and fees charge for candidate GRAs is listed. In almost half of the institutions listed (including the University of Connecticut), students who are supported on GRAs are not eligible for the candidate rate, and the number of semesters that a student can pay the reduced rate is limited. A limitation that applies at some institutions to students supported on GRAs but paying candidate rates is that the student must pay for health benefits, and has no access to institutional facilities. Such cases are indicated on Table 3.

We collected additional information on the differential between pre-candidate and candidate tuition charges at a broader set of 20 public universities\(^6\). These data indicate a sharply reduced tuition charge for GRA degree candidates at many of these institutions. At other institutions (e.g. University of Colorado) there is no tuition waiver for GRAs but the number of

\(^5\) In some instances, candidate tuition and fees are based on reduced registration, and as a result, students are no longer considered full-time; this may compromise the visa status of international students.

\(^6\) University of Cincinnati, Colorado State University, University of Illinois Chicago, University of Illinois Urbana, University of Indiana Bloomington, Iowa State University, Kent State University, Michigan State University, University of Minnesota Duluth, University of Minnesota Minneapolis, University of Missouri, Montana State University, Ohio University, State University of New York Stony Brook, University of Massachusetts, University of Louisville, University of Toledo, University of Utah, Wayne State University, University of Wisconsin Milwaukee. Institutions in which GRAs are eligible for reduced rates are indicated in bold.
credits on which the tuition is calculated may be reduced for post-candidacy students who are not subject to visa restrictions.

Other grad RA charges are listed in Table 3 assuming the minimum level of the GRA. At the University of Connecticut, stipends (ranked 10th highest), fringe rates (2nd highest), and F&A charges (two way-tie for rank of 10th/11th highest) are also high.

The cost of putting GRAs on grants is compared across the institutions in Table 3 by adding these charges according to institution policy. Hence, the cost to a proposal submitted to agencies where graduate student tuition is an allowable cost was estimated by adding graduate student stipend, fringe, F&A charges, and tuition if the institution or unit (for Unit Decision institutions) permits. Comparison among institutions is conducted for both pre-candidate and candidate GRAs. In the latter case, the candidate GRA cost is less than the pre-candidate GRA cost only if the institution GRAs are eligible for the reduced candidate tuition rate.

Under the present policy (full tuition waiver), the total GRA cost at UConn is close to the median of the top public institutions listed in Table 3. The present cost of a GRA at the University of Connecticut is slightly above $36,000. For pre-candidate GRAs, the cost at UConn is 15th highest (13th highest among the 21 institutions that have an institution-wide policy, i.e., non-Unit Decides institutions). An increase of $1100 in pre-candidate GRA costs per academic year would locate UConn at the median of the top public institutions. For candidate GRAs, the cost at UConn is at the median (13th highest of the 26 institutions listed, median = $36,160; 11th highest of the institutions with an institution-wide policy).

Under the proposed policy wherein graduate tuition would be added to the charges, the cost for a GRA at the University of Connecticut would be above the median. The cost of a GRA at the University of Connecticut would be slightly above $46,000. That cost would place UConn as the 7th highest of the pre-candidate costs among all institutions listed in Table 3 (5th highest of the institutions with an institution-wide policy). That cost would place UConn as the 3rd highest of the candidate costs, among all institutions listed in Table 3 as well as the 21 with an institution-wide policy.

Our review of top institutions included data on graduate program size and trends in federal funding. Comparison of graduate program size was conducted in response to concern that charging graduate tuition to grants will reduce graduate student enrollments. Two statistics were used for this comparison, the present ratio of graduate students to full-time faculty and the change over the last 5 years in graduate enrollment. The University of Connecticut is presently ranked highly in both of these metrics (6th and 5th respectively). With respect to recent changes in federal funding, the University of Connecticut is below the group median (22nd). Whether eliminating the GRA tuition waiver has had a detrimental effect on graduate enrollment or federal funding at these institutions cannot be assessed from these data, because information on these statistics during the period prior to waiver elimination is not available.
VI. Potential academic impacts of implementing proposal to eliminate GRA tuition waiver

A consequence of charging tuition on grants is that the incentive to support graduate students on grants will decrease relative to other costs. A comparable alternative use for grant funds would be support of postdoctoral associates. To evaluate the relative costs of GRAs and postdoctoral associates, we estimated the 100%-time (40 hours per week) equivalent of a GRA\(^7\). The full-time equivalent of a GRA costs a little more than $97,000 without the tuition charge, and a little more than $117,000 if tuition is charged to the grant. In comparison, a postdoctoral associate costs a little more than $71,000\(^8\). Hence, GRA assistance for research is already 36% more expensive than a postdoctoral associate. With the tuition charge, GRA assistance with research would cost 64% more than a postdoctoral associate\(^9\). As a result of this higher cost, some shift in the character of the research workforce towards postdoctoral associates and away from graduate students seems inevitable. We note that there may be unanticipated changes in the quality of this workforce as a result of this shift; one concern is that the Storrs region is not as attractive to postdoctoral associates, who have different needs than graduate students. Another consequence, given the reduction in the proportion of graduate students who are supported on GRAs, is that the proportion of students who are supported on TAs will rise (although the number of students who are supported on TAs is not likely to rise as it is dictated by the size of the undergraduate student body). This may have the effect of increasing graduate time to degree.

A survey was conducted of University of Connecticut faculty in December 2008 and January 2009 to characterize reactions to the proposed elimination of the tuition waiver, and to assess possible academic consequences. More than 400 faculty participated in the survey, comprising more than one-quarter of the faculty at the University.

Responses from the survey came from a diverse range of faculty (Table 4). Liberal Arts and Sciences faculty comprised the majority of respondents, and there was strong participation from faculty in the School of Engineering, College of Agriculture and Natural Resources, and the Neag School of Education. Most respondents were full or associate professors. The respondents were research active; more than half generate more than $100,000 in research revenues each year. A plurality is funded by federal agencies. Most have at least three graduate students at present and graduated at least three students in the last five years.

Respondents recognized that tuition charges were permitted by funding agencies. Most felt that at least some of the agencies supporting their research permitted tuition charges on grants (Table 4). Of those that had an opinion, only 24% felt that none of the agencies permitted tuition charges.

Perceived academic consequences of eliminating the tuition waiver include reductions in graduate support and other changes in the workforce. Survey responses provided strong evidence for reduced employment of GRAs. Of those respondents who had an opinion on the question (who were four-fifths of the respondents), 93% predicted that they would support fewer

\(^7\) Calendar year stipend of $25,090 plus fringe benefits at a rate of 26.6% during the academic year and 7.7% during the summer, plus F&A costs, multiplied by 2.

\(^8\) Stipend of $36,996 plus fringe benefits at a rate of 26.6% during the calendar year plus F&A costs.

\(^9\) NIH places a cap on GRA compensation so that it does not exceed the total compensation for a postdoctoral associate. Our estimate of GRA costs with tuition may exceed this cap.
GRAs if the proposal to end tuition waivers was implemented (Table 4). This concern about potential reduction in support extended to Masters students (89% of those with an opinion predicted reduction in masters student support). Responses were less clear-cut with respect to changes in postdoctoral support. A relatively high percentage (28%) responded with no opinion. About as many responded that their proposals would include fewer postdocs or the same number as those that responded they would support more postdocs (Table 4).

Survey results indicate a widespread feeling that tuition charges would reduce funds available for other uses in grants. Nine-tenths of respondents had an opinion on this question; of those 96% predicted that funds available for other grant expenses would decrease (Table 4).

A portion of the survey was designed to assess opinions of how GRA tuition and fees that are recovered in grants should be allocated. The Provost has agreed that all revenues collected through GRA tuition charges would be expended in support of graduate education and research. Most respondents (81% of those with an opinion, 73% overall) feel that funds for graduate student recruitment are inadequate. When presented with a range of possible uses, there was most enthusiasm for allocating the funds to existing graduate student support as RAs or fellowships (60%-70% ranked as highest or next-to-highest priority). There was slightly less support for returning the funds to PIs or the PI’s academic unit (54% ranked as highest or next-to-highest). There was weak support for using the funds for faculty start-up packages, equipment grants, or honors student research; in each case the proportion of respondents who viewed these uses as lowest priority exceeded those who viewed them as highest priority. Respondents were also encouraged to suggest other uses for the funds. Nineteen respondents reiterated support for graduate student programs and suggested various kinds of fellowships, awards, or additional TA support. Fifteen reiterated or clarified support for returning the funds to PIs or the PI’s academic unit. Ten comments detailed how funds could be used for postdoctoral support, visiting professorships or more widely distributed support for faculty. Two suggested that the funds could be used to improve grant administration. One respondent reported that institutions have had to pay penalties for using tuition recovery fund for some of the allocations listed in the survey (e.g. start-ups, honors programs).

The task force agrees that funds should be used for graduate student support. We emphasize that these new revenues should be used for additional support of graduate education and research, rather than as replacement funding to offset losses of funding from other sources. It would be important to maintain accountability and transparency in these uses of graduate tuition funds.

An important issue regarding use of funds that would be recovered should the proposal be implemented is how funds should be allocated among larger University units. One guiding principle should be fair return of the funds to those that generated the GRA support. For instance, any monies generated by Health Center faculty should be returned to the Health Center for use by the Graduate Programs Committee to further research and graduate education. Any monies generated by Storrs faculty would remain at Storrs. Within the Storrs campus, there also are various possible strategies for allocating the money for research. One suggestion was to use the existing formulas used by the RAC for large grants. Another suggestion is to return money to colleges, or even to departments that generate the funds.

Faculty members of this committee concur with survey respondents that there are potential negative academic impacts of the proposal. To document whether concerns about
negative repercussions are widely felt, the survey included an invitation to make general comments about the proposal to eliminate the graduate tuition waiver. We received more than 200 such comments through the survey, and additional direct communications via e-mail. Rather than including each comment in the report, we identified themes that we summarize here. These themes should be regarded as reflecting the consensus of faculty members of the task force.

The major concern is that the implementation of charging tuition to grants will be detrimental to research programs at the University of Connecticut. This view predicts that the policy will decrease the amount of dollars available for research due to formal (hard) or informal soft caps in funding. As stated by one respondent: “As a former NSF program officer, I can assure you that…adding a tuition line to a grant will not lead to the awarding of larger grants but only to a reduction in other lines in the grant”. Such reductions in grant-supported resources will affect research productivity, and decrease the research competitiveness of UConn. Similarly, charging tuition to grants will reduce motivation for doing research and will result in the loss of competitive faculty. Many respondents expressed a serious concern that the implementation of this policy is being proposed in the middle of this uncertain economic climate, with “cuts” in funding and shrinking resources for conducting research. Some respondents stated that they would be less motivated to write grants when additional costs not related to their own research are proposed. There was also a concern of losing faculty to other institutions.

There is widespread perception that charging tuition to grants will reduce the number of graduate students, to the detriment of the University. Faculty consider graduate students “the lifeblood of the research programs”. Many believe that the role of graduate students in supporting research is underestimated and the decrease in their number will have a disproportionate effect on research. Some respondents stated that they will hire more post-doctoral associates instead of graduate students if the policy is implemented, but recruitment and retention of post-docs for a time sufficient for the research program may be difficult in Storrs. The perceived repercussions extend beyond the research component of the University. Many respondents noted that graduate education is an important University function. Some warned that reducing the number of graduate students will have a negative impact of unknown magnitude on graduate programs that are already struggling for funding.

The current climate for research funding is doubtless contributing to negative attitudes regarding the proposal among the faculty. Federal funding for research is stagnant (AAAS fiscal year reports on Research and Development, www.aaas.org/spp/rd/). After more than 10 years of increasing size of Research Project Grant (RPG) awards, award sizes leveled out in 2003 and are now dropping. RPG success rate was level until 2003 and is now decreasing. The overall NIH budget parallels this temporal pattern. Similarly, the NSF budget has leveled or fallen slightly since 2004. The state and nation are now in recession and further substantial cuts to state funding of the University, after a recent round of 3% reductions, are imminent. In this climate, University leadership must consider every possible unrealized source of new revenue; this report is an effort to consider one source in a comprehensive way.

A decision regarding the tuition waiver requires balancing revenues gains in dollar terms against cost in terms of academic character and competitiveness. From the faculty’s perspective, elimination of the tuition waiver would yield a net loss to the University of Connecticut.

\textsuperscript{1}The table reports data as of 11/8/2007. Units with no GRAs (e.g. Fine Arts) are not included in the table. Academic year tuition waiver amount is estimated by multiplying fall tuition waivers by 2. University of Connecticut Health Center GRAs are not included in this table; description of UCHC GRAs is provided in the text.

</tbody>
</table>

\(^1\) NIH has established the entry-level postdoctoral NRSA stipend (presently $36,996 per year at the UCHC) as the limit for total compensation of a graduate student. Recoverable tuition limit of $3200 per student/per year is estimated based on UCHC GRA salary and fringe of $33,825.

\(^2\) GRA salary of $27,500 + 23% fringe equals $33,825. Full tuition cannot be charged on GRA because of NIH cap on GRA compensation, so UCHC can recover $3200 per student annually, or about $448,000 for all student supported on GRA. This is discounted by 50% as these funds shift from categories that are subject to 50% IDC into tuition, which is not subject to IDC.

</table>
For institutions with differential tuition across graduate programs, the amount listed reflects the rate for natural sciences. For PAC institutions, the amount required on grants is listed rather than the amount indicated on the tuition schedule.

Amounts listed are based on the lowest possible fee for students who achieve candidacy status at their institutions. The amount listed is twice the per-term rate of tuition and fees for students who are candidates and are all-but-dissertation. At some institutions (particularly those listed in next column as GRA NE), the reduced rate is offered only for one semester, or in some cases additional semesters upon petition.

The amount here is the stipend for an entry-level student.

Fringe rates are estimates because institutions vary in how they are assessed. When value is NA the median value for the other institutions is used in calculations.

Pre-candidate tuition and fees (if tuition policy is not NC), stipend and fringe, and F&A charges for stipend and fringe. This column uses candidate tuition and fees if GRAs are eligible for reduced rate (candidate t&f policy is not GRA NE), and uses precandidate tuition and fees if GRAs are not eligible for reduced rate.

The ratio of graduate students per full-time faculty

Percent change in grad enrollment 2003-2007; data from Common Data Set.

Percent change in federal research funds 2003-2006; reflects most recent data available from NSF.

13 Full text of question: A fundamental part of this plan, if implemented, would be to take money gathered from tuition payments on grants and earmark it for research and graduate education. Which type of investment would you favor? (high priority = 1, low priority = 5):
14 Some return of funds to the faculty member or the member’s academic unit
15 Large multi-user equipment purchases
16 Additional comments on proposal to eliminate tuition waiver and reallocation of revenue (16; all negative); return of funds to PI or academic unit (15, all in favor); use of funds to support graduate students (additional fellowships of various kinds, additional funding for TAs, additional funding for grad school; 18); use of funds in OSP/grant administration (2, in favor); use of funds for postdoctoral support or visiting professorships (4, in favor); use of funds for faculty (5, for example to offset equipment breakage, bridge funding, funding for outreach); miscellaneous (4, for example allocate to operating fund)
Appendix A. STORRS RESEARCH ADVISORY COUNCIL STATEMENT ON TUITION CHARGES TO GRANTS (February 2008)

The Storrs Research Advisory Council applauds President Hogan's articulated research and graduate education agenda. e.g., "We need to strengthen our research profile and also build more really top-notch graduate programs. Building a substantial presence at the graduate level and enhancing our sponsored research and other forms of research are exactly what a university needs to sustain its high position and move up from 25 into the top 20." (UConn Advance, Oct 1, 2007).

We propose that the ongoing discussion regarding recovery of graduate student tuition on faculty grants presents an ideal opportunity to quickly implement the President’s vision. UConn’s research profile has lagged behind that of its peers in a number of respects. At this time, the Administration has the opportunity to move UConn forward, by fostering an environment that directly supports the all-important graduate and research programs that a healthy Research I enterprise requires.

As active and productive members of the University's Research community, we find the proposal to charge graduate tuition to research grants to be counterproductive. We question whether the proposed action will generate sufficient revenue to counterbalance the multitude of negative effects it will have on UConn's research enterprise. For the following reasons, we believe this policy will make it unlikely that we will achieve our goal of improving our status among Research I institutions any time in the near future.

1. **Graduate student enrollment would decline because a major incentive for supporting grads would disappear.** Data from institutions (e.g., UMass) that have recently instituted graduate tuition charges (or their equivalent) to grants show that these Institutions have experienced declines in the number of graduate students. This is because charging tuition on grants makes graduate research assistants disproportionately expensive. Up to this point, a major incentive for PIs at UConn to request grant support for graduate students has been that the expense was reasonable when balanced against the amount of time committed to a project by a graduate student. Charging tuition to grants will put this amount over the threshold of reasonable PI behavior. A PI wishing to maximize his or her output from a particular award would be foolish (and perhaps even negligent) to request support for a graduate student, contributing 20 hours per week on a project, over a technical assistant or post-doctoral fellow, contributing 40 hours per week, given their respective annual costs (i.e., Tier II grad salary + fringe and tuition = $31,469; technician lowest level salary + fringe = $41,504; post-doc $43,026; the hourly labor cost for a graduate student would be $30, compared to $20 for a technician or $21 for a postdoc). The resultant predictable decline in number of graduate students would have a negative impact on UConn's national standing given that the number of Ph.D. degrees conferred annually is an important measure of a University's research productivity as indicated by most major indices (e.g., Lombardi, NRC, etc). However, we also note that this decline would reduce the amount of funds the Administration would capture from tuition charges. UConn currently has a total of ~5,500 graduate students, ~1,200 of which are supported on research assistantships, approximately half of which would be eligible for tuition charges. If this number were to decline, tuition charges are likely to yield only a few million dollars. The council wonders if the negative impact on UConn's research reputation alone is worth the gain in funds? (i.e., ~2.1 million if 500 RAs at 50% tuition, 4.2 million if 500 RAs at 100%).

2. **Tangible support for research.** UConn's research infrastructure lags well behind that of its peer institutions, and certainly well behind that of its aspirant institutions. However, the tuition waiver for graduate research assistants supported on external grants that UConn currently provides, represents a glowing example of an effective and tangible exception to this situation, and serves to compensate for other inadequacies in research support.
3. **Caps on new awards DO exist.** Many granting agencies and/or programs have specifically articulated caps on awards (e.g., NSF’s PEET: $750K/5yrs; USDA: $400K/2yrs; NSF IGERT: $650K/yr); others have relatively well understood upper limits that are readily obtained from program officers (e.g., NSF BS&I: $500K/total). Research costs increase each year, despite the fact that the expectations of funding agencies have certainly not declined, nor have the budgets of such programs increased. Forward thinking Institutions will recognize this reality and do what they can to enable their PIs to accomplish the goals of their projects, rather than require their PIs to make do with less overall research funding, and thus with fewer personnel. Maintaining the policy of waiving graduate tuition on grants will increase UConn’s research productivity relative to that of institutions without such policies.

4. **Caps on continuing awards are also very REAL.** PIs are experiencing similar caps on continuing awards. For example, annual budget increases that PIs have garnered from agencies such as DOE barely cover annual standard salary and fringe increases. e.g., awards that provided support for 2 graduate students in the past, now support only 1.5 students; the tuition charge will reduce this by another half a student. Competitive renewals from NIH are restricted to increases of 20% over previous awards; while this would cover the proposed tuition charge, it would not serve NIH's purpose of allowing the researcher to cover increases in costs of supplies and annual salaries, fringe, etc.

5. **Graduate students are key elements of undergraduate research.** By all measures, a healthy graduate program is a pivotal component of the success of undergraduate programs at Research I institutions, which must include a diversity of undergraduate research opportunities. Through their informal interactions with undergraduate students, which occur most often in research lab settings, graduate students are key to the success of undergraduate research programs. Given the Administration's ambitious plans to substantially increase the size of the Honors Program, it seems clear that the proposed change in tuition charges will have a negative impact on undergraduate education at a particularly inopportune time. Because of the informal nature of their contributions to undergraduate research education, we note that the contributions of graduate students occur at no additional cost to undergraduate education.

6. **Harm would be unevenly distributed among units.** The hardship resulting from the proposed change would not be evenly distributed among schools and colleges. In fact, it would disproportionately affect some of our most research active science and engineering programs, many of which do not have the service courses necessary to buffer the effects of the penalty because they allow for more TA positions. Ultimately, the cost, given limited funds, would be transferred to graduate students in the form of salary cuts. As a consequence, some students would become second-class citizens, in particular teaching assistants (with full tuition waivers) would garner salaries that might greatly exceed those of research assistants.

7. **Reduction in IDC rate.** The RAC suspects that the proposed new policy would adversely affect future indirect cost rate negotiations with sponsoring agencies. The criteria that are considered in the assessment of this rate currently include personnel costs; the extent of the impact is unclear at this time but would bear consideration.

8. **Bad timing!** The current granting climate is unusually poor. Competition is severe. At this time PIs need as much assistance as possible from their institutions in order to remain viable, competitive members of funding communities. To remain competitive they must maximize their productivity with the relatively limited funds available to them. Charging tuition on grants would place an additional drain on already strained budgets, effectively increasing the indirect cost rate. This is the last thing PIs need in this difficult funding climate.

Those of us who have been meeting with OSP Director candidates over the past few weeks can attest that the experiences of these individuals at other Universities support our
recommendations. If tuition charges against grants were to be imposed at UConn, there would indeed be a decline in the number of grad students supported on grants.

The members of the RAC have seen no detailed, thoughtful cost-benefit analysis of the effects of this initiative on research and graduate education at the University. In the absence of such data, we have based our analysis on our collective two centuries of research experience. In the absence of concrete data to the contrary, we believe that our assessment of the tuition charge initiative is both realistic and accurate.

It seems ironic that, if the Administration were to be presented with a new initiative aimed at improving the University's research endeavors and graduate programs at a cost of several million dollars, they would surely be quick to embrace that initiative and that investment. The RAC asserts that a decision by UConn to continue its support of tuition waivers for graduate research assistants would serve as a well-timed research and graduate program stimulus that would greatly benefit UConn’s standing in its community of peer institutions.

Retention and Graduation Task Force Update

Introduction

The University of Connecticut has experienced unprecedented growth in four-year graduation rates, climbing ten percentage points in just the last two years. We are now a leader nationally on this measure, ranking 11th among 58 public research universities in four-year graduation rate and 8th in average amount of time to earn a degree. This is particularly pertinent in today's higher education climate. Personal and societal expectations that accompanied increases in access at the end of the last century and into the new one, coupled with a growing emphasis on accountability and outcomes assessment have drawn increased attention to timely degree completion. Also, in the current economy, parents and students have become even more acutely aware of the financial benefits of completing a degree on time.

UConn’s approach is consistent with the assertion by Adelman (2006) that timely degree completion can be measured by what contributes to and detracts from students’ academic momentum. Retention & Graduation Task Force efforts have focused on statistically identifying factors associated with leavers and stayers and developing actionable recommendations for improvement. Our university’s strategic approach reflect a cornerstone philosophy championed by many including Tinto (1993) and Kuh (2005) that students’ early meaningful academic and social integration into the college environment is essential to their success and persistence, and that it is the institution’s responsibility to support that connection.

Stronger, more diverse entering classes connect with UConn early on in many ways: with faculty and staff in the classroom and individually through undergraduate research opportunities; with other freshmen through the First-Year Experience program; with students in like situations such as other undecided majors who are advised in the Academic Center for Exploratory Students or because of shared interests in residential learning communities, and with peers supported by the Honors Program, Student Support Services, the Counseling Program for Intercollegiate Athletes, and the Center for Students with Disabilities. Also, course availability has been bolstered by an annual reallocation of $7.8 million for additional sections and additional seats in sections.

This rich academic experience is complemented by student participation in our many student organizations and activities, cultural centers, recreational facilities, and intramural programs. Thus, our students’ growing success in earning a degree on time is a product of students’ hard work and an institution-wide commitment to their having the opportunity to achieve that important outcome.

Retention Rates

Retention success is boosted by stronger incoming cohorts, and the growth in quality and diversity among these over the past decade is well-chronicled, and continues. Average SAT scores reached 1200 this year, up 8 points from last year and, the portion of the incoming class who are minority students rose from 19% to 20%. Table 2 indicates we retain our freshmen at a high rate. Table A3 in the Appendix indicates that we rank 15th among 58 public research universities in freshman retention rate.

Note: For peer and national comparison purposes, Storrs data is used.
Table 3 shows that at the regional campuses retention rates for all and minority incoming freshmen dropped slightly from last year, by one percentage point. Reasons for the drop in regional campus minority retention from its peak two years ago are addressed in the quantitative and qualitative longitudinal data analysis section of this report.

| Table 3. Freshman Retention Rates of UConn Regional Campuses Incoming Freshmen |

| Minority                 | 65%      | 69%      | 67%      | 66%      | 69%      | 68%      | 70%      | na       | na       |

Six-year graduation rates for the Fall 2002 entering class at the regional campuses, in Table 5 below, are significantly higher than those for all and minority freshmen entering in 1996. And, compared to last year, there was a two-percent increase for all freshman and six-percent increase for minority freshmen.

| Table 5. Six-Year Graduation Rates of UConn Regional Campuses |
|--------------------------|----------|----------|----------|----------|----------|----------|----------|
| All                      | 41%      | 42%      | 45%      | 42%      | 46%      | 46%      | 48%      |

Quantitative Analyses

Tenth day fall semester data of previous incoming students were analyzed to identify characteristics more prominent among leavers than the general population. Demographic, entry-level, and academic-year student profile and performance data as they related to return status were analyzed. For freshmen, GPA cutoffs of 2.75 at Storrs and 2.50 at regional campuses were used to define voluntary leavers above and below median cumulative freshman grade point average. Currently, we have eight years of retention data regarding freshmen, four years of sophomore data, and three years of transfer student data for both Storrs and the regional campuses.
The most recent retention rates for Storrs freshmen (2007 incoming class) and sophomores (2006) are 93% and 87%. The most recent rates for regional campuses are 78% and 65%. It should be noted that voluntary leavers significantly and consistently outnumber involuntary leavers among freshmen, sophomores, and transfer students. Findings from our quantitative analyses are summarized below.

**Freshman Retention** (Fall 2000-2007 Incoming Classes)

**Storrs Campus:**
- significantly more men were dismissed than statistically predicted (i.e., a higher proportion of men among involuntary leavers than the proportion of men in the freshman population)
- significantly more women with GPAs >= 2.75 left voluntarily than statistically predicted
- significantly more African-American and Hispanic students left involuntarily than statistically predicted
- significantly more out-of-state students left voluntarily than statistically predicted, particularly among those with a GPA of >= 2.75
- dismissed students and voluntary leavers who earned a GPA < 2.75 were less likely to have enrolled in INTD180

**Regional Campuses:**
- slightly more regional campus men left involuntarily or with GPA < 2.50 than statistically predicted, and more women with GPA >= 2.50 left than statistically predicted
- more non-minority students left voluntarily with GPA >= 2.50 than statistically predicted

**Sophomore Retention** (Fall 2003-2006 Incoming Classes)

**Storrs Campus:**
- significantly more men left involuntarily than statistically predicted
- more African-American and Hispanic students left involuntarily than statistically predicted
- slightly more in-state students left involuntarily than statistically predicted
- significantly more out-of-state students left voluntarily than statistically predicted

**Regional Campuses:**
- slightly more men were dismissed than statistically predicted
- slightly more women left voluntarily than statistically predicted
- slightly more Hispanic students left involuntarily than statistically predicted

**Transfer Student Retention** (Fall 2005-2007 Incoming Classes)

**Storrs Campus:**
- most incoming transfers enrolled as sophomores, were from institutions that were four-year schools, public, and located out-of-state
- 86% of incoming transfers persisted beyond their first-year at UConn Storrs campus
- significantly more men left involuntarily than statistically predicted

**Regional Campuses:**
- most incoming transfers enrolled as sophomores or freshmen, were from institutions that were four-year schools, public, and located in-state
- significantly more men left involuntarily than statistically predicted
Qualitative Analyses

Our qualitative research comes from phone surveys of voluntary leavers during which they indicate future plans (if transferring, to which institution), reasons for leaving, things we could have done better, and steps we should take to improve retention. For the first time this year, data also was incorporated from withdrawal information regarding individual students provided by the Departments of Residential Life and Student Services. Leaver feedback, as in the past, was categorized as academic, environmental, personal, or cost-related. The qualitative data base for both Storrs and the regional campuses now contains six years regarding freshmen, three years for sophomores, and two year for transfer students.

**Freshman Attrition** (Fall 2002-2007 Incoming Classes)

*Storrs Campus:*
- in-state and out-of-state students were more likely to identify reasons for leaving associated with the environment, such as rural setting and institutional size
- in-state students were likely to transfer to CSU and the community colleges
- out-of-state students transferred to schools in their home state or closer to home
- the most often cited academic reason among freshmen was major options; personal reasons cited as often were not being ready or not the right fit
- while many students indicated that nothing could have been done better, suggested areas for improvement included providing more activities, advising, class size, and reducing cost

*Regional Campuses:*
- major options, institutional fit and cost were most often mentioned as reasons for leaving
- student suggestions included better advising, offering a greater breadth of classes, and reducing tuition

**Sophomore Attrition** (Fall 2004-2006 Incoming Classes)

*Storrs Campus:*
- major options and institutional fit were the most often cited reasons for leaving
- student suggestions included offering more major options and reducing cost

*Regional Campuses:*
- major options and cost were most often mentioned as reasons for leaving
- student suggestions included better advising, offering a greater breadth of classes, and reducing tuition

**Transfer Student Attrition** (Fall 2006-2007 Incoming Classes)

*Storrs Campus:*
- personal/family issues and major options were most often cited as reasons for leaving
- the suggestion provided most often was better advising

*Regional Campuses:*
- major options, institutional fit and cost were most often cited reasons for leaving
- suggestions included better advising and greater breadth of classes

**Graduation Analyses**

During the past year, two new analyses were added to our database. The first analysis tracked the Fall 2003 cohort of first-time, full-time Storrs and regional campus incoming freshmen to analyze characteristics of those who graduated within four years and those who finished within five years. Also,
a follow up analysis of Fall 2000 freshmen who completed degrees elsewhere as of November 2008 was conducted using the National Student Clearinghouse (NSC) Student Tracker.

Follow-Up of Fall 2003 UConn Freshmen Earning their Degree at UConn within Four to Five Years

Summary data from these analyses are presented below:

- More women entering the Storrs campus as freshmen in Fall 2003 graduated within four years than statistically predicted based on norm percentages.
- Storrs campus students graduating within four years entered as freshmen with significantly more credits.
- Storrs campus students graduating within five years also brought in more credits but not as many as those graduating on time.
- SAT scores for regional campus students who finished within four years were higher on average than statistically predicted.
- Although regional campus students graduating within four years entered with significantly more credits as freshmen; most regional campus students enrolled without any advanced credits.
- SAT Math scores were slightly higher on average than the norm for regional campus freshmen graduating within five years.

Fall 2008 Follow-Up of Fall 2000 UConn Freshmen Earning their Degree Elsewhere

Follow up information was requested from NSC on the 1,095 student leavers from the 3,561 University of Connecticut Fall 2000 full-time freshman cohorts. Since most but not all schools participate in the Clearinghouse, NSC’s Student Tracker found and reported 866 students. Findings include the following:

- In addition to our 74% Storrs 6-Yr graduation rate for this cohort, another 9% earned bachelor’s degrees elsewhere.
- The corresponding figures for the Regional Campuses are 46% and 12%.
- About 2/3 of the 106 in-state students earning a bachelor’s elsewhere earned them in-state, and the vast majority of them from CSU institutions.
- 140 of the 141 out-of-state students earning bachelor’s degrees elsewhere earned them out-of-state.
- Almost 7 out of 10 of the 89 regional campus students who earned a degree elsewhere earned them at an in-state institution, again the vast majority from CSU institutions.
- Associates degrees were awarded to a total of 30 former Storrs and regional campus students, almost exclusively at Connecticut community colleges.
- Of degrees awarded out-of-state New York, Massachusetts, and New Jersey schools had the most.
- 62% of bachelor’s degrees awarded elsewhere were awarded to females.

Intentionality

Examples of University initiatives that have had an impact on retention and graduation include:

Academic Support

- Academic advising, a cornerstone of retention is done by faculty and professional advisors in centers in each of our schools and colleges, and the Academic Center for Exploratory Students (ACES) advises freshmen undecided about a major or who are in pre-professional programs.
- The First-Year Experience program serves over 80% of students in their freshman year.
- Qualitative and Writing Centers assist students looking to improve performance in these areas.
- Students who follow-up on mid-term academic warnings often improve their performance.
- Talented high school students can take first-year university courses in advance, and our research findings indicated that students with advanced credit like this are more likely to graduate on time.
• Students can pursue their goals through numerous enrichment opportunities including undergraduate research, individualized majors, scholarships, study abroad, and e-portfolio.
• Students in academic programs with more prescribed curricula benefit from packaged scheduling.
• UCONN CONNECTS provides academic support for first and second-year students whose academic performance leaves them at risk and has received very positive user feedback from users.
• The Registrar’s office reaches out to students who have left the University just short of graduation or who have not enrolled for the coming semester without explanation.
• The 2007 Report of the Gateway Courses Committee offered recommendations to increase the success of underrepresented groups in these often rigorous science and math-related courses.
• The Counseling Program for Intercollegiate Athletes reported that a recent survey showed the NCAA Graduation Success Rate for our African-American football student-athletes placed us 7th among 68 teams participating in bowl games this year and 1st among state institutions.

Co-Curricular
• Incoming students cite the New Husky website as their most often used information source.
• Theme learning communities (honors, first-year students, women in science, global house) connect students with common interests, nurturing their experience.
• Over 350 organizations, a comprehensive intramural athletic program, club sports, and exercise and recreational facilities are accessed extensively by students.
• Renovated and expanded Student Union facilities including a new food court serve as a hub for both commuter and resident students.
• The AlcoholEdu program assists students with making healthy choices.
• Academic support and business services housed in two centralized locations and augmented with online services have made them more accessible and user-friendly.
• Our Department of Recreational Services reported 557,889 total participations last year. A 2004 study by the National Intramural-Recreational Sports Association supported existing research that participation in recreational sports is a key determinant of satisfaction and success in college.
• Over 1,000 students participate in 39 club sports at UConn.

Diversity
• Multiple outreach programs to urban schools lay a foundation for future academic success.
• Science, Technology, Engineering, Mathematics (STEM) support programs provide guidance and role models for students in these high demand areas.
• Summer programs for new students such as BRIDGE for underrepresented minorities and women looking to develop a stronger math and science foundation for engineering have been successful.
• Partnerships with school systems and the corporate sector have nurtured access and academic success.
• Multicultural Centers provide academic and social support for an increasingly diverse student body.

Student Input
• Entry level surveys during orientation indicate students’ high expectations for freshman year and provide us with important input regarding for facilitating their transition from high school to college.
• The Retention and Graduation Task Force, includes a student representative who facilitates communication this between this group and the USG Academic Affairs committee, among others.
• Satisfaction surveys offer feedback regarding students’ met or unmet needs and their perceptions of their academic and overall experience. Three-fourths of seniors completing this survey indicated they would attend UConn again and would recommend it to others.
• The Summer Session 2007 Assessment garnered 6,675 student responses, reflecting an interest in summer enrollment to get or stay on track to graduation. Students indicated the following reasons for falling behind: time off, low semester credit loads, and changing majors.
Summary

The University of Connecticut has earned national recognition, often turned to by other institutions for advice regarding how they could adapt what we have done to achieve similar results. That is a testimony to the strategic, positive, caring, nurturing and productive environment that permeates the UConn experience. We look forward to coming back to you next year with another update to apprise you regarding the results of all of your hard work and commitment to student success.

Retention & Graduation Task Force Membership

Dolan Evanovich, Chair  Vice President, Enrollment Planning, Management, and Institutional Research
Bruce Cohen  Director, Counseling Program for Intercollegiate Athletes
Pamela Fischl  Assistant to the University Registrar for R&G Outreach
Lynne Goodstein  Associate Vice Provost and Director, Honors Program
Douglas Hamilton  Associate Dean, CLAS & Department Head, Physics
Steven Jarvi  Assistant Vice Provost, Academic Center for Entering Students
Lauren Jorgensen  IPEDS and External Survey Coordinator/Webmaster/Student Data
Steve Kremer  Assistant Vice President, Residential Life
Gary Lewicki  Director, Research and Assessment
Maria Martinez  Director, Center for Academic Programs
David Ouimette  Executive Program Director, First Year Programs
Willena Price  Director, African American Cultural Center
Maria Sedotti  Coordinator, Orientation Services
Jeffrey von Munkwitz-Smith  University Senate / University Registrar
David Williams  Director, Hartford Campus
Lee Williams  Dean of Students
Michelle Williams  University Senate / Associate Professor, Psychology
David Yalof  Associate Professor, Department of Political Science
Steven Zinn  Professor, Department of Animal Science
Vacant (TBD)  Student Representative (USG)
Jonna Kulikowich  Consultant

Please Note: Retention percentages include early graduates. Graduation rates are calculated according to Federal Student Right to Know legislation and the NCAA Graduation Rates Policy. Graduation rates include students graduating in the summer session of the sixth year of study. Starting Fall 2005, retention rates are calculated based on full-time, baccalaureate entering classes.

ATTACHMENT B

Quantitative Retention Analyses

B1. Storrs Campus Fall Freshman Class 2000-2007 Freshman Leaver Summaries

2.75 Cut Point for Voluntary Leave Profiles

Leave Status: The data for 2,223 Fall 2000-07 freshmen who left the Storrs Campus are summarized in this section of the report. As shown below, most students who left did so voluntarily, and in similar numbers for freshmen with total GPA < 2.75 and >= 2.75.

Three Grade Point Average Profiles were created:
- Involuntary Leavers: 394 (18%)
- Voluntary Leavers with GPA < 2.75: 927 (42%)
- Voluntary Leavers with GPA ≥ 2.75: 902 (40%)

Gender: Significantly more men were dismissed. This is a large statistical effect. Significantly more women with GPA ≥ 2.75 left the Storrs campus.

<table>

B2. Regional Campus Fall Freshman Class 2000-2007 Freshman Leaver Summaries

2.50 Cut Point for Voluntary Leave Profiles

Leave Status: The data for 1,459 Fall 2000-07 freshmen who left the regional campuses are summarized in this section of the report. As at the Storrs campus, most students who left did so voluntarily, and of those shown below the majority left voluntarily with GPA < 2.50.

Three Grade Point Average Profiles were created:
- Involuntary Leavers 282 (19%)
- Voluntary Leavers with GPA < 2.50 710 (49%)
- Voluntary Leavers with GPA ≥ 2.50 467 (32%)

Gender: Over 8 years, slightly more men left involuntarily or with GPA < 2.50. By comparison, more women left voluntarily with GPA >= 2.50.

<table>
<thead>
<tr>
<th>Gender</th>
<th>Norms</th>
<th>Involuntary Leavers</th>
<th>Voluntary Leavers GPA &lt; 2.50</th>
<th>Voluntary Leavers GPA ≥ 2.50</th>
</tr>
</thead>
<tbody>
<tr>
<td>Men</td>
<td>(51)</td>
<td>161 (57)</td>
<td>390 (55)</td>
<td>209 (45)</td>
</tr>
<tr>
<td>Women</td>
<td>(49)</td>
<td>121 (43)</td>
<td>320 (45)</td>
<td>258 (55)</td>
</tr>
</tbody>
</table>

Minority Representation: Across 8 years more non-minority students left voluntarily with GPA >= 2.50.

<table>
<thead>
<tr>
<th>Minority Representation</th>
<th>Norms</th>
<th>Involuntary Leavers</th>
<th>Voluntary Leavers GPA &lt; 2.50</th>
<th>Voluntary Leavers GPA ≥ 2.50</th>
</tr>
</thead>
<tbody>
<tr>
<td>Non-Minority</td>
<td>(59)</td>
<td>157 (56)</td>
<td>444 (62.5)</td>
<td>312 (67)</td>
</tr>
<tr>
<td>Minority</td>
<td>(29)</td>
<td>96 (34)</td>
<td>200 (28)</td>
<td>80 (17)</td>
</tr>
<tr>
<td>Other</td>
<td>(12)</td>
<td>29 (10)</td>
<td>66 (9.5)</td>
<td>75 (16)</td>
</tr>
</tbody>
</table>

College/School: The majority of students enrolled at regional campuses were CLAS or ACES program students, and they left in slightly higher percentages than their norm involuntarily and with GPA < 2.50.

<table>
<thead>
<tr>
<th>College/School</th>
<th>Norms</th>
<th>Involuntary Leavers</th>
<th>Voluntary Leavers GPA &lt; 2.50</th>
<th>Voluntary Leavers GPA ≥ 2.50</th>
</tr>
</thead>
<tbody>
<tr>
<td>Agriculture</td>
<td>(3)</td>
<td>14 (5)</td>
<td>34 (5)</td>
<td>19 (4)</td>
</tr>
<tr>
<td>CLAS &amp; ACES</td>
<td>(85)</td>
<td>254 (90)</td>
<td>621 (87.5)</td>
<td>398 (85)</td>
</tr>
<tr>
<td>Business</td>
<td>(3)</td>
<td>3 (1)</td>
<td>16 (2)</td>
<td>15 (3)</td>
</tr>
<tr>
<td>Engineering</td>
<td>(4)</td>
<td>5 (2)</td>
<td>17 (2)</td>
<td>15 (3)</td>
</tr>
<tr>
<td>Family Studies</td>
<td>(1)</td>
<td>2 (1)</td>
<td>2 (.1)</td>
<td>3 (.1)</td>
</tr>
<tr>
<td>Fine Arts</td>
<td>(1)</td>
<td>0 (0)</td>
<td>1 (.1)</td>
<td>5 (1.5)</td>
</tr>
<tr>
<td>Nursing</td>
<td>(3)</td>
<td>4 (2)</td>
<td>17 (2.5)</td>
<td>10 (2)</td>
</tr>
</tbody>
</table>

INTD 180: Across 8 years, enrollment in INTD 180 for all three leave status profiles was lower than the norm INTD 180 enrollment for the regional campuses. It should be noted that enrollment in this course of students who were dismissed was significantly below the population average. Similarly, enrollment of students who left voluntarily with GPA < 2.50 was below the population average, but the discrepancy was not as high as for students dismissed.

<table>
<thead>
<tr>
<th>Enrolled</th>
<th>Norms</th>
<th>Involuntary Leavers</th>
<th>Voluntary Leavers GPA &lt; 2.50</th>
<th>Voluntary Leavers GPA ≥ 2.50</th>
</tr>
</thead>
<tbody>
<tr>
<td>Yes</td>
<td>(67)</td>
<td>151 (53.5)</td>
<td>394 (56)</td>
<td>236 (50.5)</td>
</tr>
<tr>
<td>No</td>
<td>(33)</td>
<td>131 (46.5)</td>
<td>314 (44)</td>
<td>231 (49.5)</td>
</tr>
</tbody>
</table>

Other Notes: Leaver status data for SAT Mathematics and Verbal scores were consistent with the population norm, as were leave status profiles for students enrolled in the CAP Program.
**B3. Storrs Campus Sophomore Leaver Summaries for Incoming Fall 2003-2006 Freshmen**

**Student Status Summary:** The data summaries for 11,776 sophomores are presented in the next series of tables. The majority of students stayed (93%).

<td>Yes</td>
<td>(73)</td>
<td>279 (75)</td>
</tr>
<tr>
<td>No</td>
<td>(27)</td>
<td>93 (25)</td>
</tr>
</tbody>
</table>

Advanced Standing: Freshmen who graduated in four or more years entered with significantly more credits than the general freshman population. This distribution is skewed statistically, so credit categories were created and reported in the range table following this category. (Note: The average number of credits (1.85) brought in by students graduating in four or more years are about the same as the 1.84 brought in by students who graduated within four years in Table B9).

ATTACHMENT C

Freshman, Sophomore and Transfer Student Voluntary Leaver Phone Survey Results
Storrs and Regional Campuses

Introduction

The University conducts an annual phone survey of students who choose not to return for the fall semester. Student employees interview students or parents of students who left voluntarily, asking them four open-ended questions: 1. What was your reason for leaving? 2. What could UConn have done better or differently? 3. What steps should UConn take to improve retention? 4. What are your plans (and if you are transferring to another institution where)? Responses are coded and placed into one of four categories: Environment, Academics, Personal, and Cost. Results of the surveys of freshman, sophomore, and transfer are discussed in this report.

STORRS CAMPUS FRESHMEN (2002-2006)

1. Respondent Summary

<table>
<thead>
<tr>
<th>Incoming Fall Class</th>
<th>2002</th>
<th>2003</th>
<th>2004</th>
<th>2005</th>
<th>2006</th>
<th>2007</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Call List</td>
<td>247</td>
<td>252</td>
<td>213</td>
<td>187</td>
<td>159</td>
<td>196</td>
<td><strong>1,254</strong></td>
</tr>
<tr>
<td>Responded</td>
<td>180</td>
<td>164</td>
<td>146</td>
<td>114</td>
<td>90</td>
<td>145</td>
<td><strong>839</strong></td>
</tr>
</tbody>
</table>

- Table 1 above indicates a 74% response rate for voluntary freshman leavers this year.
- Over the six-year period, the response rate for this group has been 67%.

2. Storrs Campus Freshmen: Plans After Leaving UConn

<table>
<thead>
<tr>
<th>Incoming Fall Class</th>
<th>2002</th>
<th>2003</th>
<th>2004</th>
<th>2005</th>
<th>2006</th>
<th>2007</th>
<th>Total</th>
</tr>
</thead>
<tbody>
<tr>
<td>Transfer</td>
<td>133</td>
<td>132</td>
<td>112</td>
<td>100</td>
<td>80</td>
<td>81</td>
<td><strong>636</strong></td>
</tr>
<tr>
<td>Plan to Return</td>
<td>25</td>
<td>13</td>
<td>7</td>
<td>2</td>
<td>0</td>
<td>4</td>
<td><strong>51</strong></td>

</tbody>
</table>

- Over the six-year period, 88 respondents indicated they were transferring to CSU institutions and 43 indicated they were transferring to the state’s community colleges.
- Institutions in the northeast dominated transfers going out-of-state: URI, UMass, Northeastern, Maine, a SUNY school or Boston University.

</table>

- Students most often cited environment-related reasons for choosing to leave, followed by personal and academic reasons.
- The top specific reasons mentioned were major options, wrong fit, campus size and location, and cost.
- *Cost* was cited more in 2007 than the four previous years.

</table>

- Out-of-state freshmen who chose to leave indicated the environment as their primary reason.
- The most often cited reasons were *distance from home, rural location, cost, and major options*.
- *Cost* was cited more in 2007 than the three previous years.

</tbody>
</table>

26 and 24 students responded "nothing" when asked what steps we should take to improve retention in the 2 most recent years listed

- Steps to improve retention cited by out-of-state freshmen most often related to the environment.
- However, the three most cited individual steps cited by out-of-state students include: more individual advising, more financial aid, and reducing class size.

STORRS CAMPUS SOPHOMORES (2004-2006 Incoming Freshman Classes)

Note: 28, 40 and 37 students responded *nothing* to things UConn could have done better or differently in the 3 most recent years.

- *Academic* suggestions were offered most often among things UConn could have done better.
- *Individual advising* led the way among specific items, followed by *reducing tuition.*

28 students indicated *nothing could have been done better/differently* and 28 replied *nothing* to steps UConn should take.

- Leavers pointed to *major options, fit, individual advising, and greater breadth of classes.*
ATTACHMENT D

2007 UConn Entry Level Survey

Introduction: Obtaining early feedback from students, and at selected intervals during their undergraduate matriculation, is essential to meeting their needs as they progress along the enrollment curriculum through and beyond graduation. With this in mind, the Division of Enrollment Management administers the Survey of Entry Level Students to incoming freshmen during Orientation to gain insights into students’ expectations as they near their first fall semester. This survey, previously completed and coded manually, is now a web-based survey which students complete on-line and whose responses are tabulated electronically. The survey, now administered every other year, garnered responses from 2,667 incoming Storrs freshmen in May and June of 2007. Additional annual response rates are provided below, as well as a set of key questions posed in the Entry Level Survey.

<table>

</tbody>
</table>

Key Questions:

- How important were selected factors in your decision to attend UConn?
- Which information sources did you or your family use to get information about UConn either before or after you applied? How would you rate the sources you used?
- What types of information did you research on the UConn web site before you applied and after you decided to attend UConn?
- What is the one thing you are looking forward to most & least about attending UConn?
- Looking ahead to your first year at UConn, how easy or hard do you think it will be to do the following?

A. Decision to Attend: Incoming freshmen were asked to rate the impact that selected factors had on their decision to attend the University of Connecticut on a scale ranging from extremely, very or somewhat important to not very or not at all important. Table 1 on the following page indicates new students’ top reason for choosing to attend UConn were its being a good educational value, followed by preparation for a job and our outstanding faculty. Other top factors included academic reputation, extracurricular opportunities, facilities, course breadth, graduate school preparation, cost, and academic department reputation. These findings are consistent with results of the The American Freshman: National Norms Survey for Fall 2006. The top two factors influencing college choice based on 271,441 responses to UCLA’s Higher Education Research Institute Survey were academic reputation and graduates getting good jobs.

**B. Information Sources:** Students were asked how often they used various information sources (a lot, some, or not) and how they would rate the sources they used (excellent, good, fair, or poor). Table 2, below, indicates that *our website* was the students’ primary information source, followed by *campus tours* and *current/former students*. Table 3 shows the same three sources also receiving the highest marks for satisfaction. These data reflect recent years’ efforts with regard to the website, orientation, and the Visitors Center. The high rank of current/former students being utilized as an information resource by prospects is yet another benefit of having satisfied students and graduates. They are important ambassadors for the University! Our findings are supported by results of a study involving 7,867 students from 20 four-year institutions conducted by Eduventures higher education consulting group released in March 2007. Their study also reported the *college web site* as the leading information source. Personal recommendations were cited as the next most utilized in the Eduventures study followed by campus visits and view books. Table 2 indicates our students citing *campus visits* as a leading information source, as well as personal recommendations from three groups: *current/former students, high school guidance counselors, and high school teachers*. Unlike Eduventures, though, *college publications* were not ranked as high use sources.

</table>

The results in Table 3 are consistent with a recent industry survey indicating campus visits as students’ most trusted source of information, followed by college web sites, and personal recommendations (Eduventures, 2006). Although our survey did not ask that specific question, assuming trust and satisfaction are congruent emotions, high satisfaction ratings accorded to the UConn tour, current/former students, and our web site support their findings.

Table 4 lists types of information students most often access on our website prior to applying and after deciding to attend. Majors/fields of study top the list of type of information most often accessed before applying. Statistical information (e.g., acceptance rate) ranks second followed by costs, course listings, and extracurricular activities. Regarding information most often accessed after deciding to attend, residence hall information is first, followed by orientation, and New Husky, a recently implemented information resource for incoming students being accessed at a growing rate. Results from the aforementioned Eduventures study that asked students performing their college search what types of information they access on institutional web sites were similar to our “before applying” results. Academic programs/majors topped their list, followed by admissions profiles and requirements, financial aid information, and extracurricular activities.

### C. Anticipation: Students’ responses to what they were looking forward to most and least about attending UConn reflect cognitive dissonance long held as common to freshman adjustment. Although meeting new people was what students look forward to most, dorm life ranked second as to what they were looking forward to least, and though students were least looking forward to academic workload, this ranked second with regard to what they were looking forward to most. Dorm life, campus size, location, distance from home, and missing home being among the things students look forward to least may foreshadow our survey findings that point to campus environment, e.g., campus location, size, and life in rural Storrs as key reasons for leaving.

D. Expectations: Students were asked how easy or hard it will be during their first year to acclimate to various components of the college experience. They responded that getting involved in extracurricular activities and making friends and fitting in would be somewhat or very easy as would receiving accurate information about degree requirements, and personal counseling if needed. Getting good grades, adjusting to having some classes taught by international teaching assistants, and finding your way around campus ranked at the bottom of things students believed would be somewhat or very easy to do. These findings regarding adjustment expectations are particularly significant in light of Tinto’s long-standing assertion that academic and social integration are both key to student persistence and success. He goes on to stress that it is the institution’s responsibility to provide opportunities for students to succeed in doing so. At UConn, adjustment is addressed by providing an informative, user-friendly New Husky website for new enrollees, a comprehensive orientation program for freshmen and their parents, and a Freshman Year Experience program providing course work and support during students’ early transition to facilitate this important successful academic and social integration. The literature regarding student persistence supports the importance of academic advising, even to the extent of it being referred to as the cornerstone for retention. Results below indicate that incoming freshmen expect quality advising to be easily available. Funding in recent years for additional faculty and advisors has helped address this issue but it continues as an ongoing challenge.

E. Conclusion: We will continue assessing incoming freshman expectations and administering student satisfaction surveys. Understanding the student mindset early on helps us meet their needs, communicate mutual expectations and responsibilities, and achieve an optimal educational experience.
ATTACHMENT E

UConn Spring 2006 Student Satisfaction Mid-Career and Senior Survey

Introduction

Research shows that schools with higher levels of satisfaction have higher graduation rates, lower loan default rates, and higher alumni giving rates. Assessing student satisfaction provides information to guide strategic planning, retention initiatives, marketing and recruitment.

Survey Descriptions

In Spring 2006, on behalf of the Division of Enrollment Management, the Center of Survey and Research Analysis (CSRA) administered the Mid-Career Student Survey to a random sample of sophomores and juniors for the fourth consecutive year. At the same time, the Seniors Survey (same survey containing some additional pertinent items) was administered to seniors by CSRA for the third consecutive year. About 1,000 students responded each year to the mid-career survey and about 425 students responded each year to the senior survey.

Mid-Career and Senior Satisfaction Survey Responses

Advising: While sophomore and junior satisfaction with academic advising showed little change between 2003 and 2006, senior satisfaction with academic advisors increased from 2004 to 2005 but came back to 2004 levels in 2006.

M = 7, 6, 5; More than Satisfied; S = 4 Satisfied; L = 3, 2, 1 = Less than Satisfied

Course Availability: Responses to “In general, how satisfied are you with the availability of the courses that you need?” indicated that 70% of sophomores and juniors and 76% of seniors were satisfied or more than satisfied with course availability. However, responses regarding individual aspects of course availability of major and general education courses were more mixed. Major courses seemed to be a bit less available than general education courses, particularly for sophomores and juniors.

Seniors’ Responses to Additional Survey Questions: Eight out of ten seniors expected to graduate in 4 years when they first enrolled at UConn, and 58% indicated they would be doing so compared to UConn’s most recent actual four-year graduation rate of 54%. Changing majors or adding a second degree or major was the most frequently cited reason for taking longer. Three of four seniors indicated they would choose UConn if they had to start over and would recommend UConn to others.

Most UConn students indicated it was easy to make friends with other students, and about 2/3 felt it was easy to get involved in campus life and get good grades.
The majority of seniors were more than proud to be a graduate of UConn; less than half indicated they were more than likely to keep in touch with UConn after graduation; and, only 28% responded that they were more than likely to join the UConn Alumni Association.

| 8. Pride and Involvement: |
|---------------------------|-----------------|-----------------|
|                           | 2004            | 2005            | 2006            |
| How proud are you to be a graduate of UConn? | M | P/L | L |
| 2004 | 78 | 13 | 8 |
| 2005 | 78 | 11 | 11 |
| 2006 | 76 | 11 | 13 |
| How likely are you to remain in touch with UConn after graduation? | M | P/L | L |
| 2004 | 52 | 18 | 30 |
| 2005 | 47 | 19 | 35 |
| 2006 | 44 | 17 | 38 |
| How likely are you to join the UConn Alumni Association after graduation? | M | P/L | L |
| 2004 | 32 | 21 | 48 |
| 2005 | 30 | 17 | 53 |
| 2006 | 28 | 17 | 55 |

M = 7, 6, 5 More than Proud/Likely; P/L = 4 Proud/Likely; L = 3, 2, 1 Less than Proud/Likely

The data below suggest that seniors felt more connected with individuals with whom they shared a common interest, e.g., major department and clubs rather than larger groups.

| 9. Connectedness |
|-------------------|-----------------|-----------------|
|                   | 2004            | 2005            | 2006            |
| How connected do you feel to the following? | M | S | L |
| The department of your major | 59 | 16 | 23 |
| A particular faculty member | 55 | 17 | 29 |
| Particular clubs that you have joined | 53 | 12 | 35 |
| Your particular graduating class | 41 | 17 | 42 |
| Your residence hall or apartment neighbors | 51 | 10 | 40 |
| The university as a whole | 39 | 22 | 38 |
| UConn athletic teams | 37 | 8 | 54 |
| The undergraduate student body | 25 | 23 | 52 |

M = 7, 6, 5 More than Satisfied; S = 4 Satisfied; L = 3, 2, 1 Less than

Here are a few summary observations:

1. UConn students indicate that they are generally satisfied with academic advising but that there is room for improvement.
2. Mixed responses to satisfaction with course availability reinforce the value of current efforts to optimize opportunities.
3. Survey findings show that 80% of seniors expected to graduate in four years when they entered UConn. The most recent four-year graduation rate was 56%.
4. Three of four seniors would choose UConn if they had to do it over again and recommend UConn to others.
5. Seniors indicated ease in making friends and getting involved in campus life but mixed responses with regard to being treated by the university like a person and not a number.
6. Seniors indicated a greater level of connectedness to smaller groups on campus than to larger groups and the University as a whole.
7. Students expressed pride in being a graduate of the University but little indication of active alumni involvement in the future.
Nominating Committee Report
to the University Senate
February 2, 2009

1. We move the following faculty deletion from the named standing committee:
   Cora Lynn Deibler from the Student Welfare Committee

2. We move the appoint Cora Lynn Deibler to Chair the Diversity Committee effective immediately through June 30, 2009.

3. We move to the following faculty and staff additions to the Diversity Committee effective immediately through June 30, 2009:
   Karen Bresciano as representative from the Growth & Development Committee
   Anne Hiskes
   Donna Korbel
   Joan Letendre as representative from the Student Welfare Committee
   Sue Lipsky as representative from the University Budget Committee
   Cathleen Love
   Margo Machida
   Maria Martinez
   Dana McGee as an ex-officio, non-voting representative of the President’s Office
   Sally Neal
   Elizabeth Omara-Otunnu
   Isaac Ortega as representative from the Curricula & Courses Committee
   Mayté C. Pérez-Franco
   Catherine Ross
   Gaye Tuchman as representative from the Faculty Standards Committee
   Susana Ulloa as representative from the Enrollment Committee
   Steven Zinn

4. We move the following student deletions from the named committees:
   Krista D’Amelio, undergraduate, from the Growth & Development Committee
   Christopher Ferraro, undergraduate, from the Budget Committee

5. We move the following student additions to the named committees:
   Wonchi Ju, undergraduate, to the Diversity Committee
   Janna Mahfoud, graduate, to the Diversity Committee
   Clive Donald Richards, undergraduate, to the Budget Committee
Annual Report of the Senate Scholastic Standards Committee
February 2008-January 2009

Committee Charge: “This committee shall prepare legislation within the jurisdiction of the Senate concerning those scholastic matters affecting the University as a whole, and not assigned to the Curricula and Courses Committee, including special academic programs, the marking system, scholarship standards, and the like. It shall make an annual report at the February meeting for the Senate. This committee shall include two undergraduate students and one graduate student. ” (By-Laws, Rules and Regulations of the University Senate).

The Senate Scholastic Standards Committee (SSSC) meets once or twice each month during the academic year. Business was completed on:

INTD Courses. The SSSC presented a motion to revise the procedures for reviewing and administering INTD courses whereby INTD courses would be re-categorized into INTD and UNIV and a University Interdisciplinary Course Committee would be established to replace the existing INTD C & C committee. The motion passed.

Academic Misconduct. The SSSC presented a report, then a motion to revise Sect II. E. 13 of the By-Laws of the Senate regarding Cheating – Student academic Misconduct. The motion carried.

Part-time students on Dean’s List. The SSSC moved that part-time students be eligible for an annual dean’s list using criteria for full-time students on a semester basis. The motion passed.

Honor’s Program. Lynne Goodstein reported to the SSSC regarding the past, ongoing and planned future changes to the Honors Program.

Other business currently under discussion:

Academic Integrity Statement. To be brought to the Feb 2, 2009 senate meeting.

Missed Course activities Due to Religious Holidays. To be brought to the Feb 2, 2009 senate meeting.

Dismissal Policy. Addressing discrepancies between Senate By-Laws, e-Policy web page, and actual practice.

Academic Calendar. Issues regarding Reading Days and other issues submitted to a SEC task force.

Completion of Incomplete and Absent Grades. To correct discrepancy in By-Laws in response to Senate action.

INTD/UNIV Courses. Resolving By-Laws interpretations regarding review and administration of INTD/UNIV Courses.

Respectfully submitted,
Current Committee:

Diane Lillo-Marin, Chair (fall 2008)  Lawrence Gramling
John Clausen, Chair (spring 2009)  Douglas Hamilton
John Bennett  Katrina Higgins
Kay Bloomberg  Janna Mahfoud
Scott Brown  Yuhang Rong
Francine DeFranco  Jeffery von Munkwitz-Smith
Gerald Gianutsos  David Wagner
Lynne Goodstein  Han Zhang
UNIVERSITY OF CONNECTICUT  
Senate Scholastic Standards Committee  
Proposal to amend the Student Code  
Feb. 2, 2009

Background
The definition of Academic Integrity included in Appendix A of The Student Code was adopted from the Graduate School. SSSC proposes to replace this definition with the following statement to underscore the importance of academic integrity in undergraduate education.

Current Wording
Cheating - Student Academic Misconduct
Academic misconduct is dishonest or unethical academic behavior that includes, but is not limited, to misrepresenting mastery in an academic area (e.g., cheating), intentionally or knowingly failing to properly credit information, research or ideas to their rightful originators or representing such information, research or ideas as your own (e.g., plagiarism).

Motion
To adopt the following statement and recommend that it replace the current definition of Cheating in the Student Code.

Academic Integrity in Undergraduate Education and Research
This part of The Student Code describes the types of acts that shall be considered academic misconduct by undergraduates, and it presents the process for imposing sanctions for such acts.

The procedures for investigating complaints and imposing sanctions for academic misconduct differ somewhat from those applied to other violations of The Student Code. However, a hearing on academic misconduct follows the general procedures set forth in Part IV of The Student Code.

A. Academic Integrity
A fundamental tenet of all educational communities is academic honesty; academic work depends upon respect for and acknowledgement of the research, ideas and intellectual property of others. When we express our ideas in class assignments, projects or exams, we need to trust that someone else will not take credit for them. Similarly, others need to trust that our words, data and ideas are our own. We find the intellectual property of others in textbooks, periodicals, newspapers, journals, solution manuals, dissertation abstracts, emails, the internet and other sources electronic or otherwise. Regardless of where we find information, protecting and acknowledging the rightful originators of intellectual property is vital to academic integrity.

B. Academic Misconduct
Academic misconduct includes but is not limited to intentionally or knowingly failing to properly credit information, research or ideas to their rightful originators or representing such information, research or ideas as your own. Knowing what constitutes academic misconduct is so important to an educational community that all students are encouraged to go to their advisors, instructors, counselors, or assistant deans of students whenever they need clarification. Students who commit acts of misconduct will be held accountable for the violation and will be subject to the sanctions and other remedies described in The Student Code.

C. Examples of Academic Misconduct
The following examples of academic misconduct are illustrative rather than inclusive; therefore, this is not an exhaustive list:
**Complicity** - Helping or attempting to help another student commit an act of academic misconduct.

**Cheating** – Attempting to deceive by misrepresenting mastery in an academic area. This includes but is not limited to:
- Copying answers, text, or other information from exams, assignments, solutions manuals, publications, web sites, or other sources and presenting it/them as your own;
- Participating in unauthorized collaborations on labs, homework, take-home exams, etc.;
- Use or attempted use of any resources or devices that have not been approved by the instructor. These may include the unauthorized use of books, literature, notes, study aids, calculators, conversations, emails, earphones, PDAs, cell phones, pagers, cameras, or other means that are not authorized by the instructor on exams, homework, projects, and other assignments.
- Using the data or ideas of others from archived assignments from past courses, paper-writing services, or soliciting others to carry out an assignment on your behalf and presenting it as your own without authorization by the instructor and/or without fully acknowledging the rightful originator.

**Fabrication** – Using invented data or information or falsifying research or other findings; this includes but is not limited to:
- Creating a false citation or acknowledgement of a direct or secondary source;
- Intentionally documenting a source incorrectly;
- Padding the bibliography; that is, including in a bibliography or other list of references a citation that was not used to prepare the assignment;
- Including any invented and/or manipulated data or information;
- Deleting or distorting data or information in such a way as to skew its interpretation or conceal its origin;
- Submitting an assignment (or parts thereof) prepared by another without attribution.

**Plagiarism** - Presenting as one’s own the published or unpublished ideas, data, words, or works of another that includes but is not limited to:
- Failing to properly attribute or acknowledge reproduced text or dialogue;
- Paraphrasing text or dialogue of another without proper attribution;
- Failing to provide complete and accurate recognition for the ideas, opinions, theories and other intellectual matter taken from others;
- Using data, facts, and/or other information that falls outside of the realm of common knowledge without proper attribution in the form of direct credit, footnotes, end notes or bibliography.

**Other Examples of Academic Misconduct or Dishonesty** include but are not limited to:
- Attempting to improperly influence any member of the university community via gifting, bribery, threats or other means;
- Presenting the same or substantially the same assignment without the authorization or knowledge of the instructor(s) in order to receive credit in two or more courses or academic areas;
- Falsifying the endorsement or approval of any member of the university community or the greater academic community;
- Altering, without authorization, an assignment, examination, grade, transcript, computer file, etc;
- Conducting unauthorized academic work for which another person will receive credit or be evaluated;
- Attempting to gain or gaining unauthorized access to restricted course resources;
- Selling or distributing restricted course resources;
- Misrepresenting your participation in a course;

Statement on class activities during religious holidays

Feb. 2, 2009

Background
It is often difficult for students when exams and other in-class activities are scheduled on religious holidays. However, it is not practical to ask instructors to avoid scheduling activities on religious holidays, as a full list of such holidays would exclude almost all class times. Therefore, the SSC recommends that instructors be urged to make reasonable accommodations for missed work.

A similar statement is issued regarding class activities missed due to university-sanctioned extra-curricular / co-curricular activities. This proposal has a different basis but a similar appeal to instructors for their reasonable accommodations.

Motion
The Senate recommends that the Provost send the following message to Deans, Directors, Department Heads, Faculty and Staff prior to the start of each semester.

Statement on class activities during religious holidays

Instructors are strongly encouraged to make reasonable accommodations in response to student requests to complete work missed by absence resulting from observation of religious holidays. Such accommodations should be made in ways that do not dilute or preclude the requirements or learning outcomes for the course. Students anticipating such a conflict should inform their instructor in writing within the first three weeks of the semester, and prior to the anticipated absence, and should take the initiative to work out with the instructor a schedule for making up missed work.
UNIVERSITY OF CONNECTICUT
Senate Scholastic Standards Committee

Proposal to amend the By-laws

Feb. 2, 2009

Background

- In November 2007 the Senate passed a motion presented by the Scholastic Standards Committee to change the bylaws (II.E.6) to remove the words “in which they are enrolled” from the section on “Grades of Incomplete and Absent”. See item #9 in minutes and attachment #18: http://senate.uconn.edu/SenMin/senmin.20071112.pdf

The approved change to the bylaws relates only to II.E.6. Unfortunately, section II.E.3. also refers to “the subsequent semester in which a student is enrolled.” The words “next semester” should replace the phrase, “subsequent semester in which a student is enrolled”.

- The same section of the by-laws also includes reference to bracketing of the GPA on student transcripts when temporary grades are assigned. This practice is no longer followed and so the wording should be deleted.

Motion

By-laws section II.E.3 shall be changed as follows:

(Deleted items in strikethrough; new language in bold)

3. Undergraduate Grades
Undergraduate grading shall be done according to a letter system in which A and A- shall represent excellent work; B+, B, and B-, very good to good; C+, C, and C-, average to fair; D+, D, and D-, poor to merely passing; F, failure; I for incomplete; X for absent from semester examination (see II.E.6 below); AUD for course auditors (see II.B.6). With the approval of the Senate Curricula and Courses Committee, courses may be graded S to represent satisfactory work or U, unsatisfactory work. These courses may or may not award credit, but in neither case will grade points be awarded. With the approval of the Senate Curricula and Courses Committee, courses may be graded Y to identify non-semester related courses. When such a course is completed, a standard letter grade will replace the Y grade. If the course is not completed, the assignment of a semester grade shall be at the discretion of the instructor and the dean of the student's school or college. The letter N is used when an instructor does not submit a grade for a particular student. Temporary grades I, X, N, Y shall not suppress the calculation of either the semester or the cumulative grade point average; however in such cases, the grade point average will be bracketed on the academic record.

N and Y temporary grades are replaced on the academic record by the actual grade when submitted by the instructor. Work to convert I, N, X temporary grades to permanent grades must be completed by the end of the third week of the next semester subsequent semester in which a student is enrolled. An N grade which remains unresolved will become N F and be computed as an F. If no grade is submitted for a grade of X, the grade will automatically revert to F and will be shown as X F.

If no grade is submitted to replace the grade of I, the automatic F will be shown as I F.

The following grade points per credit shall be assigned to grades: A, 4.0; A-, 3.7; B+, 3.3; B, 3.0; B-, 2.7; C+, 2.3; C, 2.0; C-, 1.7; D+, 1.3; D, 1.0; D-, 0.7; F, 0.

No student who has failed in a course shall have further opportunity to receive credit in that course except by repeating the work.

In all non-credit courses students shall be reported as passed "P" or failed "F".
Proposed Motion: Including Patents in the PTR Form

The Faculty Standards Committee would like to make the following motion to include patents in the PTR Form:

B. SCHOLARSHIP AND CREATIVE ACCOMPLISHMENTS (including art exhibits, musical compositions, and/or dramatic productions). All listed items should be in reverse chronological order.

1. Briefly (suggested length 300-500 words) outline your scholarly/creative goals for the next 5 to 10 years and the activities you have initiated to achieve them.

2. Scholarly/Creative Record. Provide full citations of your published work in the standard entry form used in your field for the categories listed below. Each citation should include a complete list of authors and pagination. (Do not include work in progress, submitted for publication, or in press).
   a. Books, Monographs
   b. Book Chapters
   c. Textbooks
   d. Refereed Journal Articles
   e. Conference Proceedings
      • Full length papers
      • Abstracts
   f. Miscellaneous Publications (including reviews, technical articles, and non-refereed journal articles)
   g. Exhibits, Performances, Curatorial Activity
   h. Awarded Patents

3. List published reviews of your scholarly work or creative accomplishments. (If available, attach copies as an appropriately labeled Appendix.)

4. List unpublished or unreleased work (including where it was submitted/accepted).
   a. Now accepted or in press (attach acceptance letter as an appropriately labeled Appendix).
   b. Submitted for publication or dissemination (with date of submission).
   c. Pending Patents

5. List creative works or manuscripts currently under preparation. (If you wish work in progress to be part of your evaluation, tangible evidence of the work must be made available for review. Provide this as an appropriately labeled Appendix.)
I. The Curricula and Courses Committee presents the following motion to REVISE membership and voting rights on the General Education Oversight Committee in section II.C.2.d. - Oversight and Implementation of the General Education Requirements.

BACKGROUND:
The General Education Guidelines currently specify that the “Directors of the University W and Q Centers will also be given non-voting appointments to GEOC.” The GEOC agrees that W and Q Center representation on the GEOC is important but argues that it need not always be the Director who must serve, but the Associate Director could serve in his/her place. The GEOC therefore recommends to change the language of the Guidelines to include Associate Directors of the W and Q Centers when the Directors of those Centers do not serve. It is understood that the W and Q Centers shall have ONE appointment each of either the Director OR the Associate Director.

According to the General Education Guidelines, W and Q Center Directors serve on the GEOC as non-voting ex-officio members. All other members, all of them co-chairs of GEOC subcommittees, are voting members. Whenever a W or Q Center representative is also co-chair of the respective GEOC subcommittee, s/he may currently not vote. This creates inequity among subcommittee co-chairs. The GEOC recommends the General Education Guidelines to be revised to allow W and Q Center representatives (the Directors or Associate Directors as outlined above), when they serve as co-chairs of a GEOC subcommittee, to retain voting rights. This change supports equity among GEOC subcommittee chairs and allows representatives of the Q or W Centers to vote in GEOC on matters discussed in their subcommittees and brought forth by these subcommittees to GEOC. When W and Q Center Directors or Associate Directors are not subcommittee chairs, they shall not have voting rights on the GEOC.

MOTION:
(Additions are in boldface):

d. Oversight and Implementation
“General Education Requirements will be overseen by a General Education Oversight Committee (GEOC), a faculty group appointed by the Senate and representative of the Schools and Colleges. The Committee also will have an undergraduate and graduate student representative. The GEOC shall be a subcommittee of the Senate Curricula and Courses Committee whose chair will serve as a non-voting member of GEOC. Representatives, either the Director or the Associate Director, of each of the W and Q Centers, will also be given non-voting appointments to GEOC. When Q or W Center Directors or Associate Directors are GEOC subcommittee chairs, they shall retain voting rights in the GEOC. The GEOC will monitor the General Education curriculum. The creation of a Senate-appointed committee recognizes the policy control of the Senate in matters relating to undergraduate education. This Committee will work in association with the Office of Undergraduate Education and Instruction because this office has University-wide responsibility for the health of undergraduate education and the fiscal resources to address emerging issues. Financial support for the activity of the GEOC will come from the Office of the Provost.”

Respectfully Submitted by the Senate Curricula and Courses Committee.

Michael J. Darre, Keith Barker, Marianne Buck, Janice Clark, Dipti Dedhia, Andrew DePalma, Dean Hanink, Kathleen Labadorf, Susan Lyons, Maria Ana O'Donoghue, Morty Ortega, Dante Paolino, Eric Schultz
